5. Two short-tailed (Manx) cats are bred together. They produce three kittens with long tails, five short tails, and two without any tails. From these results, how do you think tail length in these cats are inherited? Show the genotypes for both the parents and the offspring to support your answer.

The Manx cat exhibits incomplete dominance, which means that kittens can be born with full-length tails, short-length tails, or no tails at all. The parent's genotype will be Tt, and the kittens will be TT (long tail) Tt (short tail) tt (no tail). These tails can be seen in the same single litter. Because of this variation, these cats are classified according to the length of their tail. The kitten's phenotype can be short-legged, long-tailed, or lacking a tail. In simple words, this situation shows incomplete dominance since there are a range of traits that can be made.
