och mobiltelefoni och förlitar sig på best effort paketbaserad kommunikation I den andra dimensionen styrning och organisation är Internet ett explicit bottom up fenomen som styrs med andra principer och ideal än klassisk telekommunikation Till sin utformning är denna minsta möjliga koordination som krävs för att möjliggöra koordinering av de tekniska unika identifierare som behövs för att Internet ska fungera dvs idag DNS och BGP flödena av protokoll för användning av namn och nummer på Internet Båda dimensionerna de organisatoriska och tekniska följer samma designprinciper och generellt är det meningsfullt att se Internet som en ekologi av aktörer snarare än en organisation i strikt teoretiska termer exempelvis finns ingen tydlig vergränsande strategi organisationsnummer eller lönutbetalare Det är dessa designprinciper som ligger väl i linje med systemarkitekturprinciper för datorsystem som är orsaken till Internets lager design där man generellt inte ska bry som om vad som händer på andra lager än sitt eget beskrivet som separation of concerns eller i dubbel negation high cohesion i texten samt att ha en minimalistisk ansats till koordinering och enbart koordinera eller skapa beroenden mellan enheter både tekniskt och organisatoriskt är det verkligen behövs beskrivet som minimum coordination eller low coupling i texten Den andra delen fokuserar på hur Internet kan socialt påverkas eller förändras till något annat eller till något med en annan funktion sett som en styrd organisation Jag använder begreppet social robusthet som motpol till teknisk robusthet som i hur man tekniskt kan förstås Internet för att diskutera dessa aspekter Slutsatserna här mynnar ut i att Internets explicita bottom up och problemsupplägnings design gör det möjligt svårt för någon att medvetet påverka Internet för att ändra dess beskaffenhet och dessutom visar jag att även om man praktiskt lyckas ta över de formellt beslutande är den exempelvis ICANNs och IETFs styrelser så finns det inga formella eller praktiska hinder för att bara ignorera dem dvs switching costs för just ICANN eller IETF är låga om tekniskt omständligt med att konfigurera om rutter och routing tabeller och betydligt enklare än att gå från IPv4 till IPv6 där utrustning kan behövas ersättas och därmed en betydligt högre switching cost Med andra ord det är enklare att byta ut Internets koordinerare än att byta ut Internet mot något som fungerar annorlunda Däremot är den rådande politiska världssituationen ett hot mot Internet eftersom den regelstyrda och koordinerade världssituationen inte längre är lika självklar som den varit tidigare Den tredje och sista studien fokuserar på neutralitet dvs rätten till tverksoperatörer har att få gå vidare i andra dimensioner än trafikmängd som en praktiskt effekt av hur Internet styrs och fungerar Det primära praktiska bidraget är att neutralitet inte för ses som enbart en reglerings och lagstiftning fråga utan det är mer relevant att prata om i termer av neutralitet i praktiken I den bemärkelsen är lagstiftningens vara eller inte vara mindre intressant än praktisk neutralitets vara eller inte vara och en tyngdpunktsförskjutning i den offentliga debatten hade fört diskussionen närmare hur Internet fungerar Sammanfattningsvis gäller Internets designprinciper att marknadskrafter och ej direkt reglering ska möjliggöra neutralitet För att förtydliga tanken är att det ska finnas konkurrens inom de flesta nivåer eller lager och att det är av vikt att det finns konkurrens rakt igenom så att en kundvilja för paketneutralitet på tjänstenivå även påverkar nätgear och infrastrukturnivå så att det är användarnas efterfrågan som leder till neutralitet om den användarviljan finns Dock kan det mycket väl vara så att

man som användare inte är intresserad av neutralitet och de ska tjänsteleverantörer inte heller tvingas vara neutrala genom lagstiftning då det går stick i stäv med designprinciperna. Inte heller ska en grupps vilja kring neutralitet påverka andras möjligheter att vilja. Genomgående identifierar jag två kolliderande världsbilder: den distribuerade regelstyrda och koordinerade ordningen i sitt perspektiv med sina förklaringsmodeller och den mer integrerade och suverena världensordningen med sitt perspektiv och sina förklaringsmodeller. Rent praktiskt uppfyller Internet en önskad funktion i den tidigare men ej i den senare designmodellen som byggts för att tillåta snarare än kontrollera och bestämma. Exempelvis finns det inte inbyggda tekniska mekanismer i Internet för att till exempel möjliggöra statlig övervakning eller kontroll av material som finns tillgängligt och då ligger det mer i statens intresse att ha kontrollerade telekommunikationsnät som kabel-TV, mobiltelefoni och liknande lösningar där man inte helt enkelt kan lägga på ett extra lager för att uppnå kryptering, anonymitet eller tillgång till andra tjänster. I texten använder jag perspektiven tillsammans med teknologiska marknader och byråkrati för att förklara uppbyggnaden och strukturerarna i Internet, ekologin och jämför med tekniska samhällsändringar som exempelvis järnvägsnät, postverk och finansiella marknader. Jag konstaterar att Internet har varit styrt av teknologiskt baserade värderingar till skillnad från de andra exemplen som i huvudsak har utformats av dynamiken mellan byråkrati och marknad. I denna mening för jag att teknologi kan användas som struktur och motperspektiv till den klassiska uppställningen med byråkrati och marknad för att beskriva fenomenet i digitaliseringens tidsålder. Avhandlingen sätter även pågående trender i ett bredare perspektiv mot både organisation och teknik och trycker på vikten av att först delarna var för sig och tillsammans för att på ett rikare sätt måla upp helheten. The modern society is to a large extent Internet dependent. Today we rely on the Internet to handle communication for smart doors, self-scanning convenience stores, connected cars, production robots, telephones and ERP systems. The purpose of this thesis is to unbundle the Internet: its technology, its coordination and practical and theoretical consequences. Earlier research has in telecommunications focused on the Internet as one of many potential telecommunications services such as cellphones or cable TV and the management and information systems field has by and large treated the Internet as black boxable infrastructure. This thesis explains the Internet from the combined perspectives of technology and coordination. This text contains three empirical studies. The first is focused on conceptualizing and discussing the Internet in a meaningful way using both technology and coordination frameworks. I unceremoniously conclude that the Internet is both a technological and a coordination phenomenon and neither of these aspects can be ignored. The Internet is technological in that it concerns digital packet-switched digital communication as opposed to circuit-switched or purely analog communications. The technological dimension of the Internet is similar in its constituency to classical telecommunications networks and has best-effort mechanisms for packet delivery. In the other dimension, coordination, the Internet is an explicit bottom-up phenomenon, minimally coordinated or governed by other ideals than classical telecommunications networks and systems. At its core, this least necessary coordination concerns technical, unique identifiers.

necessary for inter network communication in practice today manifested as naming with the DNS protocol suite and numbering with the BGP protocol suite Both dimensions follow similar design characteristics the design of the technical Internet is similar to the design of the coordination of the Internet These design principles which are well aligned with software design principles is the cause of the Internet s layered design separation of concerns in practice and minimal view of coordination the least coordinated Internet In general terms it is fruitful to view the Internet and involved actors as an ecology rather than one organization or entity in need of governance or control The second study looks at the social resilience of the Internet That is is it possible through social means to change what the Internet is or can be viewed as I use social resilience as a counterpart to technical resilience i e resilience to technical interference In essence the bottom up and separations of concerns design of the coordination aspect of the Internet minimizes possible influence of actors intent on mission disruption I also practically show that even a take over of the central councils have little effect the constituency of the Internet since these councils are not invested with formal powers of enforcement This thesis suggests that the cost of switching from ICANN and IETF to another set of organizations is quite low due to the nature of the coordination of the Internet compared to for example switching all equipment to IPv6 capable equipment However the current political situation is a threat to the current Internet regime since an international and rule based world order is no longer on all states agendas The final empirical study focus on the practical and theoretical implications of the Internet on the case of net neutrality The primary contribution is that de facto and de jure net neutrality differ in practice and as such de facto net neutrality deserves more attention Also I suggest that any regulation either for or against net neutrality is problematic since such regulation would interfere with the inherent coordination mechanisms of the Internet As such regulation should focus on providing the necessary markets for Internet function given the coordination and design of the Internet As a net neutrality example net neutral Internet access options should exist as part of a natural service offering if wanted by customers not due to direct regulation Throughout the thesis I identify two colliding world orders both in terms of digital communication networks and terms of organizing society in general the rule based and coordinating order with its champions and the integrated or sovereign order with its champions In practical terms the Internet can be considered a want in the former the distributed perspective but not the later the integrative perspective since the Internet lacks inherent technical controls for surveillance and content control which are necessary in a world order where borders are important Regardless of if that importance stems from state oversight or intellectual property rights legislation I use these perspectives together with technology markets and bureaucracy to catch the dynamics of the Internet ecology I then compare these dynamics with other technological and societal phenomena such as railway networks postal services and financial markets And conclude that the Internet as conceptualized in this thesis can best be explained by technological values in opposite to the other examples which can best be explained by the dynamics of markets and bureaucracies without any real influence of the values of

technology As such I suggest that the classical frame of markets and bureaucracy can fruitfully be expanded with technology to better explain the Internet and similar digitization phenomena This thesis puts current trends in a broader perspective based on technology and organization where the two perspectives together better can draw the full picture in a rich fashion

**Wi-Fi 7 In Depth** Jerome Henry, Binita Gupta, Brian Hart, 2024-10-04 An essential guide for networking professionals responsible for implementing Wi-Fi 7 Join wireless networking experts Jerome Henry, Brian Hart, Binita Gupta, and Malcolm Smith on this deep dive into Wi-Fi 7 and 802.11be. The authors explore how to design and optimize your network to fully leverage Wi-Fi 7's new capabilities. You will learn in detail the inner workings of Wi-Fi 7 improvements like rTWT, puncturing, triggered uplink access, and SCS-QC. You will explore the new possibilities of multi-link operations and learn why clients will come in five possible MLO modes that dramatically change the expectations you can have for their performances. You'll gain practical, real-world insights into protocol implementation and its effects on cell design, roaming efficiency, and overall network performance. This book is an invaluable resource for anyone who designs, manages, and optimizes wireless networks or works with 802.11 from network architects and wireless network administrators to network engineers and anyone whose job includes the need to face the Wi-Fi 7 wave or understand 802.11be and its challenges in depth. Whether you are new to IEEE 802.11 standards or looking to deepen your understanding of the latest wireless networking advancements, this book gives you the knowledge and expertise to stay ahead in the evolving Wi-Fi technology landscape. Includes a foreword by Matt MacPherson, CTO of Wireless Cisco Systems. In this book, you will understand the foundational concepts of Wi-Fi and the 802.11be protocol. Explore the challenges and balance of backward compatibility in Wi-Fi 7 development. Learn about the enhancements introduced in Wi-Fi 6 and Wi-Fi 6E and their impact on 802.11be. Explore the enhancements in transmission and reception techniques, channel structure, and multi-user access management. Learn about Multi-Link Operation (MLO) and its five different modes. Understand Quality of Service (QoS) mechanisms and priority scheduling. Examine site survey and network planning considerations specific to Wi-Fi 7 deployments.

**GL.iNet GL-BE9300 (Flint 3) User Manual** Ralph B. Runge, 2025-09-28 Struggling to unlock the full power of your GL iNet GL BE9300 Flint 3 Wi-Fi 7 router? Are you ready to turn your high-speed device into a secure, optimized, and future-proof network hub without wasting hours on confusing manuals or unreliable forums?
