Developing Learning Communities Through Teacher Expertise Giselle O. Martin-Kniep, 2003-10-14 No book I have read in the past ten years has made clearer to me the difference between what I am doing as a professional developer and what I should be doing. It is so unremittingly honest about the difficulty of our work and yet so rich in practical examples that I cannot help but feel inspired to move forward and change the way I teach and learn with teachers. Richard W. Strong, Vice President, Silver Strong, however, this book is concise, provides excellent templates, and is backed by real experiences and expertise. Suzanne C. Fonoti, Principal, Flagstaff, Arizona, Unified School District. Forget expensive consultants; use the expertise within your own school for quality professional development. Martin Kniep offers practical methods for developing a reflective, collaborative environment where teachers and administrators work together to enhance teachers' practices, increase student learning, and produce valuable school processes. *Developing Learning Communities Through Teacher Expertise* includes frameworks, templates, and examples that can be employed to determine the value and implications surrounding the use of teacher-designed, standards-based curriculum and assessment, data-driven inquiry, and professional portfolios. Based on work completed at the nonprofit Center for the Study of Expertise in Teaching and Learning, this innovative volume includes examples of teachers' reflections, portfolio artifacts, and student work; sample standards-based curriculum units for different content areas and grade levels; discussion questions and recommended readings; sample worksheets and self-assessments; standards-based curriculum and assessment design tools; sample rubrics for student and teacher development. *Developing Learning Communities Through Teacher Expertise* offers step-by-step instructions for developing an action plan for incorporating learning communities into a school. Providing numerous real-life examples, Martin Kniep includes three specific teaching units and supporting material which illustrate how to identify and capitalize on teachers' existing expertise.

Learning with Understanding in the Chemistry Classroom Iztok Devetak, Saša Aleksij Glažar, 2014-01-14 This volume offers a critical examination of a variety of conceptual approaches to teaching and learning chemistry in the school classroom. Presenting up-to-date research and theory and featuring contributions by respected academics on several continents, it explores ways of making knowledge meaningful and relevant to students, as well as strategies for effectively communicating the core concepts essential for developing a robust understanding of the subject. Structured in three sections, the contents deal first with teaching and learning chemistry, discussing general issues and pedagogical strategies using macro, sub-micro, and symbolic representations of chemical concepts. Researchers also describe new and productive teaching strategies. The second section examines specific approaches that foster learning with understanding, focusing on techniques such as cooperative learning, presentations, laboratory activities, multimedia simulations, and role playing in forensic chemistry classes. The final part of the book details learner-centered, active chemistry learning methods, active computer-aided learning, and trainee chemistry teachers' use of student-centered learning during their pre-service education. Comprehensive and highly

relevant this new publication makes a significant contribution to the continuing task of making chemistry classes engaging and effective
