What Is a Galaxy?

Read the passage and answer the questions.

A galaxy is a massive system composed of stars, stellar remnants, interstellar gas, dust, and dark matter all bound together by gravity. Galaxies come in various shapes and sizes and the most common form is being spiral, elliptical, and irregular galaxies. Most galaxies contain billions to trillions of stars along with planets, moons, and other celestial bodies.

The Milky Way is one galaxy that contains our solar system and is classified as a barred spiral galaxy. It is estimated to have over 100 billion stars and spans about 100,000 light-years in diameter. Besides our own galaxy, there are many other galaxies, including spiral, elliptical, and irregular galaxies. Some galaxies are held together by their own gravity, while others are held together by the gravity of a larger galaxy.

Scientists are excited by understanding the universe's structure and evolution. They are the building blocks of the universe, and studying them can provide insight into the formation of stars and planetary systems. Observing distant galaxies allows astronomers to look back in time to the light from these galaxies reach us from billions of years in the past. The Hubble Space Telescope has advanced the study of the universe and its evolution.

The study of galaxies has advanced significantly with the development of powerful telescopes and space exploration. Astronomers use the Hubble Space Telescope, the James Webb Space Telescope, and other instruments to study galaxies and their evolution. They also use computer simulations to model the formation and evolution of galaxies and their interactions with other galaxies, including the role of dark matter and dark energy in their formation and evolution.

Understanding galaxies not only enhances our knowledge of the universe but also inspires curiosity about our place within it. Each galaxy is a vast and dynamic system that we hope to explore and understand in the future.
