

CHAPTER 2

POWER, WORK, EFFICIENCY

1. Efficiency is the ratio of the useful work done to the total energy supplied.
2. It is often written as a percentage, but should always be written as a ratio.
3. Efficiency is $\frac{\text{useful energy}}{\text{total energy}}$ or $\frac{\text{useful power}}{\text{total power}}$. It is written as a percentage only for the sake of the student and should not be used in any calculation.
4. The unit of work is the joule and the unit of power is the watt.

EXERCISES AND PROBLEMS

Study these questions before you start working on the problems. They are designed to help you understand the concepts.

Figure 2.1 Illustration of work done by a force.

1. In Figure 2.1 (a), if the force F is constant, the work done is $F \times s$. If the force varies along the distance, the work done is $\int F ds$. If F and s are at the ends of the scale, $\int F ds = \frac{1}{2}(F_1 + F_2)s$.
2. In Figure 2.1 (b), the work done in lifting a weight through a height h is $W \times h$.
3. The change in potential energy is equal to the work done on the object. $\Delta PE = W \times h = F \times s$.
4. The work done in lifting an object through a height h is equal to the change in potential energy.
