Sadraey, 2020-04-13 Provides a comprehensive introduction to the design and analysis of unmanned aircraft systems with a systems perspective Written for students and engineers who are new to the field of unmanned aerial vehicle design this book teaches the many UAV design techniques being used today and demonstrates how to apply aeronautical science concepts to their design Design of Unmanned Aerial Systems covers the design of UAVs in three sections vehicle design autopilot design and ground systems design in a way that allows readers to fully comprehend the science behind the subject so that they can then demonstrate creativity in the application of these concepts on their own It teaches students and engineers all about UAV classifications design groups design requirements mission planning conceptual design detail design and design procedures It provides them with in depth knowledge of ground stations power systems propulsion systems automatic flight control systems guidance systems navigation systems and launch and recovery systems Students will also learn about payloads manufacturing considerations design challenges flight software microcontroller and design examples In addition the book places major emphasis on the automatic flight control systems and autopilots Provides design steps and procedures for each major component Presents several fully solved step by step examples at component level Includes numerous UAV figures images to emphasize the application of the concepts Describes real stories that stress the significance of safety in UAV design Offers various UAV configurations geometries and weight data to demonstrate the real world applications and

examples Covers a variety of design techniques processes such that the designer has freedom and flexibility to satisfy the design requirements in several ways Features many end of chapter problems for readers to practice Design of Unmanned Aerial Systems is an excellent text for courses in the design of unmanned aerial vehicles at both the upper division undergraduate and beginning graduate levels

Large Aperture Array Radar Systems for Automotive Applications Fabian Schwartau,2021-10-18 The radar besides camera and Lidar systems is a core sensor to enable autonomous driving The relatively limited angular resolution is the major drawback of the radar This thesis shows the development of a conceptual future radar system for automotive applications The focus is on providing a large antenna aperture to achieve the required high angular resolution Two genetic algorithms are developed to optimize the antenna array for a good side lobe level while providing high angular resolution Two demonstrators are built to implement certain aspects of the proposed radar system and prove the general concept viable The first demonstrator features a large aperture with a limited side lobe level and is using a modular approach The modules are synchronized with a radio over fiber system The second demonstrator uses the previously proposed antenna array which is implemented with a synthetic aperture radar approach The system s capabilities in a real scenario are demonstrated and the reconstruction of a high resolution three dimensional image from the captured data is shown Das Radar stellt neben Kamera und Lidar Systemen einen zentralen Sensor f r das autonome Fahren dar Dabei ist die relativ geringe Winkelaufl sung der prim re Nachteil des Radars Diese Arbeit zeigt die Entwicklung eines konzeptionellen zuk nftigen Radarsystems f r automobile Anwendungen Der Schwerpunkt liegt auf der Umsetzung einer gro en Antennenapertur um die erforderliche hohe Winkelauf l sung zu erreichen Zwei evolution re Algorithmen werden vorgestellt um das Antennen Array auf einen guten Nebenkeulen Pegel zu optimieren und gleichzeitig eine hohe Winkelauf l sung zu erreichen Zwei Demonstratoren werden gebaut um bestimmte Aspekte des vorgeschlagenen Radarsystems zu implementieren und die Durchf hrbarkeit des allgemeinen Konzepts zu zeigen Der erste Demonstrator weist eine gro e Apertur mit einem begrenzten Nebenkeulen Niveau auf und verwendet einen modularen Ansatz Die Module sind mit einem Radio over Fiber System synchronisiert Der zweite Demonstrator verwendet die zuvor entworfene Antennenanordnung die mit einem Radar mit synthetischer Apertur realisiert wird Die F higkeiten des Systems werden in einem realen Szenario demonstriert und die Rekonstruktion eines hochaufl senden dreidimensionalen Bildes aus den erfassten Daten gezeigt
