**Learn Linux in 5 Days** Jason Cannon,2015-02-08 If you want to learn how to use Linux and level up your career but are pressed for time read on As the founder of the Linux Training Academy and an instructor of several courses I ve had the good fortune of helping thousands of people hone their Linux skills Interacting with so many people who are just getting started with the Linux operating system has given me invaluable insight into the particular struggles and challenges people face at this stage One of the biggest challenges for people interested in learning the ins and outs of Linux is simply a lack of time When you are working with a limited and extremely valuable resource you want to make sure you make the most of it The next biggest challenge for Linux newcomers is knowing where to start There is so much information available that deciding what to focus your attention on first is a big enough hurdle to keep many people from even starting What s worse is starting down the path of learning only to discover too many concepts commands and nuances that aren t explained This kind of experience is frustrating and leaves you with more questions than answers That s why I ve written this book Not only have I condensed the most important material into five sections each designed to be consumed in a day I ve also structured the content in a logical and systematic manner This way you ll be sure to make the most out of your time by learning the foundational aspects of Linux first and then building upon that foundation each day In Learn Linux in 5 Days you will learn the most important concepts and commands and be guided step by step through several practical and real world examples As new concepts commands or jargon are encountered they are explained in plain language making it easy to understand Here is what you will learn by reading Learn Linux in 5 Days How to get access to a Linux server if you don t already What a Linux distribution is and which one to choose What software is needed to connect to Linux from Mac and Windows computers Screenshots included What SSH is and how to use it including creating and using SSH keys The file system layout of Linux systems and where to find programs configurations and documentation The basic Linux commands you ll use most often Creating

renaming moving and deleting directories Listing reading creating editing copying and deleting files Exactly how permissions work and how to decipher the most cryptic Linux permissions with ease How to use the nano vi and emacs editors Two methods to search for files and directories How to compare the contents of files What pipes are why they are useful and how to use them How to compress files to save space and make transferring data easy How and why to redirect input and output from applications How to customize your shell prompt How to be efficient at the command line by using aliases tab completion and your shell history How to schedule and automate jobs using cron How to switch users and run processes as others Where to go for even more in depth coverage on each topic What you learn in Learn Linux in 5 Days applies to any Linux environment including Ubuntu Debian Linux Mint RedHat Fedora OpenSUSE Slackware and more Scroll up click the Buy Now With 1 Click button and get started learning Linux today

**High Availability Per Lo Stack Lamp** Jason Cannon,2015-03-09 Uno dei modi pi comuni di rendere disponibili le applicazioni web attraverso lo stack LAMP LAMP un acronimo che sta per Linux Apache MySQL e PHP in questo ambiente Linux il sistema operativo Apache il server web MySQL il server di database e PHP il linguaggio di programmazione Questa architettura pu essere utilizzata per servire applicazioni open source o anche app personalizzate Siti web famosissimi come Facebook Wikipedia e Yahoo usano questo ambiente per servire le loro applicazioni a milioni di utenti in tutto il mondo e anche moltissime applicazioni open source quali WordPress Drupal Joomla MediaWiki e SugarCRM si appoggiano allo stack LAMP Che stiate implementando o facendo da piattaforma ad un applicazione personalizzata o che stiate usando una soluzione open source dovrete usare un architettura che massimizzi il tempo di uptime dell applicazione elimini i single point of failure permetta di scalare senza tempo di fermo e sia relativamente semplice da implementare e supportare meglio prendersi il tempo all inizio per tenere in considerazione i requisiti e gli obiettivi a lungo termine del servizio che state implementando invece di prendere decisioni sull architettura durante un momento di emergenza come pu essere un

potenziale aumento del traffico o un interruzione dell'elettricità. Fare queste cose durante un'emergenza non è il modo migliore di gestirle. Ogni progetto può avere requisiti diversi ma in genere ci sono solo alcuni punti importanti da considerare di sicuro: la ridondanza, la scalabilità, le prestazioni e la gestione. La ridondanza, come si riesce a reagire ad eventuali guasti, la scalabilità, la possibilità di gestire una base di utenti più grande o più piccola, le prestazioni implicano assicurarsi che l'esperienza di ciascun utente sia ad un livello almeno accettabile. Avere un servizio ridondante, scalabile e ad alte prestazioni non serve a niente se non si riesce a gestire.
