Preface

This book presents a concise and comprehensive introduction to the fundamentals of linear algebra. The subject is developed so that it is accessible to the students of varied backgrounds. A very basic algebra and elementary properties of matrices and determinants are pre-requisites. However, almost all the material that is needed for the text is given in the first chapter with reasonable details to make the book as much self-contained as possible. A fairly large number of examples are included at the end of each section for conceptual understanding. Examples are also used to illustrate the computational aspect and to employ further related results. Each section ends with a collection of exercises with different levels of difficulty that help the reader to check their understanding and to apply it to concrete problems.

Chapter 2 deals with the elementary concepts like vector space, sub-space, dual and duality. Although the emphasis here is on finite dimensional vector spaces, examples of infinite dimensional vector spaces are also included to highlight the difference between these two classes. Linear transformations, isomorphism theorems, the matrix of a linear transformation, inner forms and dual spaces are also discussed in this chapter.

Chapter 3 is an analysis of a single linear operator on a finite dimensional vector space. Characterisations of diagonalisable and triangulable operators appear in this chapter. The concept of generalized eigenspaces is used to obtain an inductive procedure for constructing a Jordan basis for a triangulable linear operator. The last section is about the rational canonical form and again the approach is algorithmic.

Chapter 4 is about finite dimensional inner product spaces. This chapter treats with normal and self adjoint operators and the spectral decomposition. Also it deals with conjugative operators and polar and singular value decomposition.

The last chapter is on bilinear forms and extends the results of inner product spaces to bilinear spaces. The main thrust of this chapter is to
