validated the best state of the network was pointed out and tested on the testing dataset and some real images The result showed that the LeNet was able to classify images of documents in a pretty high accuracy At the end of the project I modified the network and discussed the affect that those changes had on the network with the purpose of creating another similar network which can perform better than the original one The result proved that it worked a little better than its original version

powerful yet simple language R Style and approach The book is an enticing journey that starts from the very basics to gradually pick up pace as the story unfolds Each concept is first defined in the larger context of things succinctly followed by a detailed explanation of their application Each topic is explained with the help of a project that solves a real world problem involving hands on work thus giving you a deep insight into the world of machine learning 2002 IEEE International Conference on Data Mining Vipin Kumar,2002 Consists of 72 full papers and 49 short papers from the December 2002 conference on the design analysis and implementation of data mining theory systems and applications Topics of the full papers include evolutionary time series segmentation for stock data mining cluster merging and splitting

Automated Abduction ,1990 Machine Learning Ivan Bratko,Sašo Ožeroski,1999 **Progress in Artificial Intelligence** Luc Steels,J. A. Campbell,1985 **Readings from AI Magazine** Robert Englemore,1988 Temporal Pattern Mining in Dynamic Environments Andreas D. Lattner,2007 Many domains feature a dynamic characteristic like logistics sports or medicine and it would be useful to learn about frequent patterns e g in what situations a traffic jam is likely to happen Additionally we are facing complex situations with many objects and relations that might change over time The learning approach developed in this work identifies frequent temporal patterns out of qualitative interval based descriptions of dynamic scenes by extending the Apriori algorithm and combining ideas from relational as well as sequential association rule mining approaches Temporal relations in patterns are represented by qualitative interval relations as they have been introduced by Allen and Freksa The search for frequent patterns is a top down approach starting by the most general empty pattern and performing specialization steps by applying an optimal refinement operator In a second step prediction rules are generated by splitting the identified patterns into precondition and consequence parts The developed concepts are implemented in the MiTemP system and are evaluated on synthetic data and soccer matches of the RoboCup simulation league
