Research and Development in Intelligent Systems XXIV Max Bramer,Frans Coenen,Miltos Petridis,2007-12-03 An agent in a multi agent system MAS has to generate plans for its individual goal but these plans may conflict with those that are already being scheduled or executed by other agents It must also be able to complete its planning and resolution of these conflicts within a reasonable time to have an acceptable quality plan Although we adopt hierarchical planning HP for example see 7 12 using the decision theoretic planning DTP approach 6 for efficient planning it is not trivial to apply HPO to MAS In HP appropriate abstract plans are selected level by level to maximize the utility U_p where p is the expected plan comprising a sequence of primitive actions However in the MAS context conflicts between agents affect the efficiency and quality of resulting plans When a conflict is found at lower levels an additional sophisticated process for avoiding it conflict resolution must be invoked and some extra actions such as waiting for synchronization and detouring may have to be added to the plan The conflict resolution process may become costly or fail Even a single conflict if it is difficult to resolve will result in a plan with considerably lower quality than it otherwise would have As a result in multi agent systems the second or third best plans may result in better overall performance

The Singularity Is Nearer Ray Kurzweil,2024-06-25 AN INSTANT NEW YORK TIMES BESTSELLER ONE OF TIME S 100 MOST INFLUENTIAL PEOPLE IN ARTIFICIAL INTELLIGENCE The noted inventor and futurist s successor to his landmark book The Singularity Is

Near explores how technology will transform the human race in the decades to come. Since it was first published in 2005, Ray Kurzweil's *The Singularity Is Near* and its vision of an exponential future have spawned a worldwide movement. Kurzweil's predictions about technological advancements have largely come true with concepts like AI intelligent machines and biotechnology now widely familiar to the public. In this entirely new book, Ray Kurzweil brings a fresh perspective to advances toward the Singularity, assessing his 1999 prediction that AI will reach human level intelligence by 2029 and examining the exponential growth of technology that in the near future will expand human intelligence a millionfold and change human life forever. Among the topics he discusses are rebuilding the world atom by atom with devices like nanobots, radical life extension beyond the current age limit of 120, reinventing intelligence by connecting our brains to the cloud, how exponential technologies are propelling innovation forward in all industries and improving all aspects of our well-being such as declining poverty and violence and the growth of renewable energy and 3D printing. He also considers the potential perils of biotechnology, nanotechnology, and artificial intelligence, including such topics of current controversy as how AI will impact employment and the safety of autonomous cars and After Life technology which aims to virtually revive deceased individuals through a combination of their data and DNA. The culmination of six decades of research on artificial intelligence, *The Singularity Is Nearer* is Ray Kurzweil's crowning contribution to the story of this science and the revolution that is to come.
