Dynamics of Endogenous Economic Growth Gordon W. Schmidt, 2003-04-15 This book is concerned with the methods by which the dynamics of endogenous economic growth systems may be analysed and numerically computed and with the validation of such numerical computations through qualitative economic reasoning The methods comprise linearisation phase space analysis and a variety of numerical integration techniques In particular the book provides a detailed examination of the transitional dynamics the movement from some current state towards a steady state equilibrium of the influential endogenous growth model from Paul Romer's 1990 Journal of Political Economy article Endogenous Technological Change

Endogenous Growth Gang Gong, Alfred Greiner, Willi Semmler, 2004 By contrasting endogenous growth models with facts one is frequently confronted with the prediction that levels of economic variables such as R D expenditures imply lasting effects on the growth rate of an economy As stylized facts show the research intensity in most advanced countries has dramatically increased mostly more than the GDP Yet the growth rates have roughly remained constant or even declined In this paper we modify the Romer endogenous growth model and test our variant of the model using time series data We estimate the market version both for the US and Germany for the time period January 1962 to April 1996 Our results demonstrate that the model is compatible with the time series for aggregate data in those countries All parameters fall into a reasonable range

Endogenous Growth in Historical Perspective Ramesh Chandra, 2021-11-24 In recent decades new endogenous growth theory has become popular but the ideas are not new They go back at least as far as Adam Smith and the subsequent contributions made notably by Alfred Marshall and Allyn Young This book critically discusses and provides an historical perspective to the entire spectrum of endogenous growth theories starting with Adam Smith and ending with Paul Romer It fills an important gap in the literature While contributions of individual authors are readily available there is no comprehensive study on the subject covering such a vast ground critically discussing these authors in a comprehensive framework It collates all the arguments and economic viewpoints in one collection providing both the seasoned economist and a graduate economist with a critical comparison of origin mechanisms conclusions and policy implications of these models

Lecture Notes on Economic Growth (II) Xavier Sala-i-Martin, 1990 This paper explores the five simplest models of endogenous growth We start with the AK model Rebelo 1990 and argue that all endogenous growth models can be viewed as variations or microfoundations of it We then examine the Barro 1990 model of government spending and growth Next we look at the Arrow Sheshinski Romer model of learning by doing and externalities The Lucas 1988 model of human capital accumulation is then considered Finally we present a simple model of R D and growth

A Contribution to the Empirics of Economic Growth N. Gregory Mankiw, David Romer, David N. Weil, 1990 This paper examines whether the Solow growth model is consistent with the international variation in the standard

of living It shows that an augmented Solow model that includes accumulation of human as well as physical capital provides an excellent description of the cross country data The model explains about 80 percent of the international variation in income per capita and the estimated influences of physical capital accumulation human capital accumulation and population growth confirm the model s predictions The paper also examines the implications of the Solow model for convergence in standards of living that is for whether poor countries tend to grow faster than rich countries The evidence indicates that holding population growth and capital accumulation constant countries converge at about the rate the augmented Solow model predicts

An Algebraic Solution to a Canonic Romer Endogenous Growth Model Pedro José Gutiérrez Diez, Carlos R. Palmero, 2011 The purpose of this paper is to provide an exact algebraic solution to a fully specified Romer endogenous growth model The proposed model has three main virtues First taking Romer s 1986 model as the starting point we build a completely and explicitly micro founded competitive general equilibrium model Second this version consistently incorporates all the suggestions in Romer 1986 concerning externalities and complementarity between knowledge and physical capital Lastly our model has an algebraic solution that allows the dynamics of the variables to be completely described and does not require a characterization through a phase plane geometric analysis The result is then a canonic Romer model of endogenous growth fully specified tractable and coherent

Essays on Endogenous Growth, Economic Openness and Labor Allocation Young Joon Kim, 2010 This dissertation consists of three chapters Chapter 1 introduces an endogenous growth model and Chapter 2 and 3 provides empirical evidence in support of the growth model Chapter 1 presents a simple endogenous growth model It is based on Romer 1990 but extends the original model by incorporating individual workers skill heterogeneity Based on the heterogeneity the model has a labor allocation mechanism between skilled and less skilled sectors This labor allocation determines the long run growth rate of the economy The model shows how the distribution of human capital affects on the labor allocation and hence on the economic growth and income distribution The model can be extended to an open economy With the heterogeneity the extended model explains distributional effect as well as growth effect of the economic openness Chapter 2 provides empirical evidence in support of the model presented in the chapter 1 The human capital measures from the model show better performance in explaining the role of human capital on a country s income per worker The proposed human capital measures also perform better in growth regressions When the three specifications based on three different models Solow Nelson and Phelps and Romer are implemented using a panel of 45 countries the human capital measures based on the Romer type endogenous growth model provide the most significant relation between human capital and economic growth Chapter 3 provides empirical evidence in

support of the extension part of the model presented in the chapter 1 According to the model economic openness can affect labor allocation through two channels knowledge spillover and specialization First the openness promotes knowledge spillovers and hence increases the productivity of workers in skilled sectors This makes the economy employ more workers in skilled sector Second the openness causes global specialization which leads more employment in skilled sector for advanced countries but at the same time less employment in skilled sector for less advanced countries The empirical results obtained using cross country panel data support these two effects of knowledge spillover and specialization The Uzawa-Lucas Endogenous Growth Model Paolo Mattana,2017-11-30 Using state of the art mathematical techniques this book provides a complete characterization of the Uzawa Lucas growth model In his path breaking contribution on the Mechanics of Economic Growth Lucas suggested that human capital is the key variable through which technical change is most likely to occur and by taking some initial intuitions of Uzawa a step further proposed a two sector capital accumulation growth model where human capital is allowed to enter a neo classical style production structure in multiplicative terms In this book Paolo Mattana fully explores the dynamic possibilities of the model from both the market and the centralized perspective A critical evaluation of the inefficiency in the market economy is also provided **Endogenous Growth Theory** Philippe

Economic Growth Models ,2012 This thesis discusses the economic growth theory that Paul Romer introduced in his classic paper Endogenous Technological Change The main improvement that Romer makes over the previous theory is to include an explicit model of the level of technology and how this level changes due to the activities of a research sector In addition the intensity of the activity in the research sector is set endogenously in Romer s model This is achieved in a simplified framework which makes everything in the economy analytically solvable in terms of a few parameters describing the large scale economy As background material the thesis also introduces and develops the neoclassical economic model This then allows comparison and contrast to pre existing economic growth theories that set technological growth exogenously to the model *An Endogenous Growth Model with Expanding Range of Consumer Goods and of Producer Durables* Danyang Xie,1994 *Is Growth Exogenous?* Ben Bernanke,Refet S. Gürkaynak,2001 Is long run economic growth exogenous To address this question we show that the empirical framework of Mankiw Romer and Weil 1992 can be extended to test any growth model that admits a balanced growth path and we use that framework both to revisit variants of the Solow growth model and to evaluate simple alternative models of endogenous growth To allow for the possibility that economies in our sample are not on their balanced growth paths we also study the cross sectional behavior of TFP growth which we estimate using alternative measures of labor s share Our broad conclusion based on both model estimation and growth accounting is that long run growth is significantly correlated with behavioral variables such as the savings rate and that this

correlation is not easily explained by models in which growth is treated as the exogenous variable Hence future empirical studies should focus on models that exhibit endogenous growth Endogenous Growth ,1993
