

## *Elliott Introduces High-Speed Multi-Valve Steam Turbine*

### **Optimizing efficiency and reliability**

Elliott's new high-speed, high-efficiency multi-valve steam turbine combines the reliability of an impulse style turbine with the efficiency of a reaction style turbine to provide outstanding performance in a range of refinery services. Designed to meet API 612 standards, the new turbine has a small footprint but packs a powerful punch, offering a technical leap forward in speed and efficiency. At typical pressure and temperature\* operating conditions, the turbine's efficiency is greater than 80%.

The turbine's high-speed condensing design eliminates the need for a separate gear box which greatly reduces the amount of mineral oil, cooling water, and steam required for high-efficiency operation. The new 19-stage, multi-valve model comes as a direct driver for compressors in oil and gas-related services including hydrocracking, hydrotreating, catalytic reforming, alkylation, refrigeration, gas boosting and coking. The turbine's high speed capabilities allow for smaller compressor frame sizes with fewer stages for a smaller overall footprint. Elliott's new high-speed turbine is also available in a back pressure design with fewer stages.

### **Features & Benefits**

- Direct drive – eliminates the need for a separate gear box
  - High performance – greater than 80% efficiency
  - Operational efficiency – 12-14% steam savings
  - Turbine will speed match the compressor – allows for smaller compressor frame size with reduced number of stages
  - Compact casing size – 20% in space savings
  - Lower costs – less mineral oil and cooling water required
  - Reduced maintenance – fewer spare parts required
- \* Typical operating conditions: 600 psig / 700°F. High pressure / high temperature operating conditions: 1200 psig / 900 °F.
