A Healthcare Solution Mark A. Vonderembse,David D. Dobrzykowski,2016-10-14 The evidence is undeniable By any measure the US spends more on healthcare than any other country in the world yet its health outcomes as measure by longevity are in the bottom half among developed countries and its health related quality of life has remained constant or declined since 1998 In addition to high costs and lower than expected outcomes the healthcare delivery system is plagued by treatment delays as it can take weeks to see a specialist and many people have limited or no access to care Part of the challenge is that the healthcare delivery system is a large complex and sophisticated value creation chain Successfully changing this highly interconnected system is difficult and time consuming because the underlying problems are hard to comprehend the root causes are many the solution is unclear and the relationships among problems causes and solution are multifaceted To address these issues the book carefully explains the underlying problems examines their root causes using information data and logic and presents a comprehensive and integrated solution that addresses these causes These three steps are the methodological backbone of this book A solution depends on understanding and applying the principles of patient centered care PCC and resource management PCC puts patients supported by their primary care physicians back in the role as decision makers and depends on patients being responsible for their health including making good life style choices After all the best way to reduce healthcare costs and increase quality of life is to improve our health and wellness and as a result need less care In addition health insurance must be rethought and redesigned so it is less likely to lead to overuse For many people with health insurance the out of pocket cost of healthcare are small so healthcare decision making is often biased toward consumption Effective resource management means that healthcare providers must do a better job of acquiring and using resources in order to provide care quickly productively and correctly This means improving healthcare strategy and management accelerating the use of information technology making drug costs affordable and fair reducing the incidence of malpractice and rebuilding the provider network In addition implementation is difficult because there are many participants in the healthcare delivery value chain such as physicians nurses and medical technicians as well as many provider organizations such as hospitals clinics physician offices and labs Further up the value chain there are

pharmaceutical companies equipment providers and other suppliers These participants have diverse and sometimes conflicting goals but each must be willing to accept change and work in a coordinated manner to improve healthcare To overcome these problems strong national leadership is needed to get the attention and support from the people and organizations involved in healthcare and to make the comprehensive changes that will lower healthcare costs improve healthcare quality eliminate delays increase access and enhance patient satisfaction
