Strategies and Solutions to Advanced Organic Reaction Mechanisms Andrei Hent, John Andraos, 2019-06-26 *Strategies and Solutions to Advanced Organic Reaction Mechanisms A New Perspective on McKillop's Problems* builds upon Alexander Sandy McKillop's popular text *Solutions to McKillop's Advanced Problems in Organic Reaction Mechanisms* providing a unified methodological approach to dealing with problems of organic reaction mechanism. This unique book outlines the logic, experimental insight, and problem solving strategy approaches available when dealing with problems of organic reaction mechanism. These valuable methods emphasize a structured and widely applicable approach relevant for both students and experts in the field. By using the methods described, advanced students and researchers alike will be able to tackle problems in organic reaction mechanism from the simple and straight forward to the advanced. Soochow Journal of Mathematics, 2004. Controlled Natural Language Norbert E Fuchs, 2010-07-06. Controlled natural languages (CNLs) are subsets of natural languages obtained by stricting the grammar and vocabulary in order to reduce or eliminate ambiguity and complexity. Traditionally, controlled languages fall into two major types: those that prove readability for human readers and those that enable reliable automatic semantic analysis of the language. The second type of languages has a formal logical basis, i.e. they have a formal syntax and semantics and can be mapped to an existing formal language such as first order logic. Thus, those languages can be used as knowledge representation languages and writing of those languages is supported by fully automatic consistency and redundancy checks, query answering, etc. Wikipedia. Various controlled natural languages of the second type have been developed by a number of organizations and have been used in many different application domains, most recently within the Semantic Web. The workshop CNL 2009 was dedicated to discussing the similarities and the differences of existing controlled natural languages of the second type, possible improvements to these languages, relations to other knowledge representation languages, tool support, existing and future applications, and further topics of interest.
