*Agricultural Research* David Douglas Paterson,2008-07-01 STATISTICAL TECHNIQUE IN AGRICULTURAL RESEARCH A Simple Exposition of Practice and Procedure in Biometry BY D D PATERSON B Sc B Sc AGRIC EDIN Reader in Agriculture at the Imperial College of Tropical Agriculture Trinidad B W I FIRST EDITION FOURTH IMPRESSION MCGRAW HILL BOOK COMPANY INC NEW YORK AND LONDON 1939 PREFACE Recent advances in statistical method have given the research biologist a new and valuable weapon to aid him in the accurate interpretation of his data Statistics is a branch of applied mathematics and a comprehensive understanding of the theory is possible only to those of a mathematical turn of mind In consequence a full appreciation of the fundamental mathematics must remain the prerogative of the few On the other hand there is no reason why those who are interested in statistics solely as an aid to scientific research should forego the advantages of applying statistical methods to research data derived from any standardized experimental design The interpretation of the results by means of the appropriate statistical formulas should then become a purely routine operation The available literature is rather technical in character and several years experience with postgraduate students has shown that there is a real demand for a more elementary exposition of statistical technique This book is an attempt to meet this demand and is essentially the detailed analysis of data from a representative series of experiments typical of some of the commoner statistical problems encountered by the average research worker In certain examples the original data have been slightly simplified in order to make it easy to follow the successive stages in the arithmetical calculations It is hoped that these representative examples may serve as a practical guide to the research worker in the design and interpretation of his experiments
