Eco-Stats: Data Analysis in Ecology David I Warton,2022-08-10 This book introduces ecologists to the wonderful world of modern tools for data analysis especially multivariate analysis For biologists with relatively little prior knowledge of statistics it introduces a modern advanced approach to data analysis in an intuitive and accessible way The book begins by reviewing some core principles in statistics and relates common methods to the linear model a general framework for modeling data where the response is continuous This is then extended to discrete data using generalized linear models to designs with multiple sampling levels via mixed models and to situations where there are multiple response variables via model based approaches to multivariate analysis Along the way there is an introduction to important principles in model selection adaptations of the model to handle non linearity and cyclical variables dependence due to structured correlation in time space or phylogeny and design based techniques for inference that can relax some of the modelling assumptions It concludes with a range of advanced topics in model based multivariate analysis relevant to the modern ecologist including fourth corner latent variable and copula models Examples span a variety of applications including environmental monitoring species distribution modeling global scale surveys of plant traits and small field experiments on biological controls Math Boxes throughout the book explain some of the core ideas mathematically for readers who want to delve deeper and R code is used throughout Accompanying code data and solutions to exercises can be found in the ecostats R package on CRAN

Data Analysis Charles M. Judd, Gary H. McClelland, Carey S. Ryan,2011-03-15 This completely rewritten classic text features many new examples insights and topics including mediational categorical and multilevel models Substantially reorganized this edition provides a briefer more streamlined examination of data analysis Noted for its model comparison approach and unified framework based on the general linear model the book provides readers with a greater understanding of a variety of statistical procedures This consistent framework including consistent vocabulary and notation is used throughout to develop fewer but more powerful model building techniques The authors show how all analysis of variance and multiple regression can be accomplished within this framework The model comparison approach provides several benefits It strengthens the intuitive understanding of the material thereby increasing the ability to successfully analyze data in the future It provides more control in the analysis of data so that readers can apply the techniques to a broader spectrum of questions It reduces the number of statistical techniques that must be memorized It teaches readers how to become data analysts instead of statisticians The book opens with an overview of data analysis All the

necessary concepts for statistical inference used throughout the book are introduced in Chapters 2 through 4 The remainder of the book builds on these models Chapters 5 7 focus on regression analysis followed by analysis of variance ANOVA mediational analyses non independent or correlated errors including multilevel modeling and outliers and error violations The book is appreciated by all for its detailed treatment of ANOVA multiple regression nonindependent observations interactive and nonlinear models of data and its guidance for treating outliers and other problematic aspects of data analysis Intended for advanced undergraduate or graduate courses on data analysis statistics and or quantitative methods taught in psychology education or other behavioral and social science departments this book also appeals to researchers who analyze data A protected website featuring additional examples and problems with data sets lecture notes PowerPoint presentations and class tested exam questions is available to adopters This material uses SAS but can easily be adapted to other programs A working knowledge of basic algebra and any multiple regression program is assumed
