Demographic Transition Model

The Demographic Transition Model (DTM) is a conceptual tool for understanding population change in different countries. The DTM is a model for understanding global and regional population dynamics. It is based on the relationship between birth rates and death rates over time.

Stage 1

Stage 1 is the original high birth rate and high death rate. Because of this, the natural increase rate is close to zero. The population grows slowly because the death rate is high and the birth rate is high. The birth rate and the death rate are both high because of high infant mortality.
