Summary

Biotechnology, when thoughtfully applied (1980), has become an integral feature of the public's consciousness, health, and life. Issues such as food, disease, genetically engineered foods, cloning, biotechnology and heredity impact and interact with the public's feelings and interests, which in turn influence the comprehension and acceptance of the fundamental of biotechnology in various and complex manner.

Other authors' reports, biotechnology, biotechnology, in reality, is a collection of a set of techniques that involve the use of a variety of organisms that lead themselves to a wide range of applications, in producing bioenergy, and in improving health care, food production, environmental quality, and consumer pleasure.

An understanding of cell identity and nature has either preoccupied or captivated its characteristics, its cultivation, and its functions, matters of fundamental to its handling in the laboratory, and later its applications in the environmental, health, industrial, and medical sectors that contribute to human progress and welfare. The different articles covered by this paper focus on these basic issues, and on the application of microorganisms, plants, and animals. Moreover, a concise study on genetic engineering and recombinant DNA technology is provided. The utilization of genetic information in microbial, plant and animal cells is contributing to disease prevention and cure, gene therapy, production of biopharmaceuticals, cellular vaccines, etc. There is not even one example that involves ethics and heredity. With the preeminence of the new Biotechnology, focus on biotechnology, research in the food and health
