Dominique François, André Pineau, André Zaoui, 2012-12-06 Advances in technology are demanding ever increasing mastery over the materials being used the challenge is to gain a better understanding of their behaviour and more particularly of the relations between their microstructure and their macroscopic properties This two volume work of which this is the first volume aims to provide the means by which this challenge may be met Starting from the mechanics of deformation it develops the laws governing macroscopic behaviour expressed as the constitutive equations always taking account of the physical phenomena which underlie rheological behaviour The most recent developments are presented in particular those concerning heterogeneous materials such as metallic alloys polymers and composites Each chapter is devoted to one of the major classes of material behaviour As the subtitles indicate Volume I deals with elasticity and plasticity and Volume II with viscoelasticity viscoplasticity damage phenomena and the mechanics of fracture and of contact Annexes to Volume I give the relevant basic tools and techniques of continuous media mechanics crystallography and phase changes Most of the chapters end with a set of exercises to many of which either the full solution or hints on how to obtain this are given each volume is profusely illustrated with explanatory diagrams and with electron microscope photographs *Mechanics of Material Behaviour*
