Connection Frank Ho, Amanda Ho, 2015-12-14 What's wrong with the traditional drill computation From tutoring point of view there is nothing wrong to give them to children for practice on fluency and grasp of basics However there is something wrong from children's point of view that is they are boring dull and not fun Why do children feel that way Well the time has changed but the format of traditional computation worksheets has not caught up with the pace of the society The future belongs to a generation who understands how to process information and the information might include digits bytes numbers graphics images languages symbols equations etc Children today might chat with others on the internet while downloading or uploading files and viewing movie clips at the same time Multi tasking and the multi way of processing information seem to have come as a second nature to children but is our computation format reflecting the way that children are living today Certainly not this is one reason why children feel so bored and lost interest to continue to work on the same old style of computation worksheets These simple monotonic basic number facts computation worksheets are no longer reflecting the real world which the young generation is facing today or will be living in the future The computing world children are facing today is much like a rich tapestry where diversified fabrics and colours are integrated Children today are absorbing not just numbers but an array of information like image sound music symbols spatial information or even abstract ideas all bundled together and delivered through many types of media Children today are not happy just working on pure number drill without any other stimulus or motivator After realizing the importance of having fun while learning Ho Math Chess has been embarked on an important teaching philosophy that is to integrate chess and puzzles into math worksheets so that children can learn math while having fun Ho Math Chess has created a series of special printable workbooks to have a synergetic effect by integrating or converging arithmetic basic number facts chess mazes and information processing all in one worksheet This is accomplished through Ho Math Chess own trademarked proprietary technologies such as Symbolic Chess Language SCL Frankho Puzzle Frankho Maze and the Ho Math Chess training set With this invention of math chess and puzzles integrated worksheets a child is acting as a data warehouse manager and sorts matches or classifies data in an information environment which simulates a cell phone screen using an incredible variety of learning concepts namely chess

symbols spatial relation logic comparison tables patterns mazes computing etc by networking all kinds of information together The learning process is much like to search information using the internet Only when children have successfully followed instructions using SCL and as a result created a question themselves can a solution be found at last Ho Math Chess workbook is a multi function workbook it trains children not only their basic computing ability but also trains them to be an astute data warehouse manager or an excellent data miner by developing their problem solving ability and critical thinking skills
