Fishing, Foraging and Farming in the Bolivian Amazon Lisa Ringhofer,2009-12-01 Empirical in character this book analyses the society nature interaction of the Tsimane a rural indigenous community in the Bolivian Amazon Following a common methodological framework the material and energy flow MEFA approach it gives a detailed account of the biophysical exchange relations the community entertains with its natural environment the socio economic use of energy materials land and time Equally so the book provides a deeper insight into the local base of sociometabolic transition processes and their inherent dynamics of change The local community described in this publication stands for the many thousands of rural systems in developing countries that in light of an ever more globalising world are currently steering a similar but maybe differently paced development course This book presents insightful methodological and conceptual advances in the field of sustainability science and provides a vital reader for students and researchers of human ecology ecological anthropology and environmental sociology It equally contributes to improving professional development work methods

Living in a Dynamic Tropical Forest Landscape Nigel Stork,Stephen M. Turton,2009-01-26 This book brings together a wealth of scientific

findings and ecological knowledge to survey what we have learned about the Wet Tropics rainforests of North Queensland Australia This interdisciplinary text is the first book to provide such a holistic view of any tropical forest environment including the social and economic dimensions The most thorough assessment of a tropical forest landscape to date Explores significant scientific breakthroughs in areas including conservation genetics vegetation modeling agroforestry and revegetation techniques biodiversity assessment and modeling impacts of climate change and the integration of science into natural resource management Research achieved in part due to the Cooperative Research Centre for Tropical Rainforest Ecology and Management the Rainforest CRC Written by a number of distinguished international experts contains chapter summaries and section commentaries The American Biology Teacher, 1992 **The British National Bibliography** Arthur James Wells, 2002 *Wood Density* Jose Kallarackal, Fernando Ramirez, 2024-06-22 Recent research has shed light on the crucial role of wood density a fundamental physical property as a functional trait This means wood density isn't just about how much a piece of wood weighs but how it influences a plant's entire strategy for survival and growth While variations exist between individual species a surprising trend has emerged the majority of this variation can be traced back to a plant's genus or even family This strong phylogenetic signal indicates that wood density is a deeply ingrained characteristic shaped by a plant's evolutionary history This newfound understanding allows us to leverage wood density as a taxon-based functional trait By considering the typical wood density of a plant group like a genus or family we can improve models and predictions related to various ecological and functional aspects in forests and plantations Over the past couple of decades scientists have been actively exploring the connections between wood density and a wide range of plant functions Denser wood is often linked to slower growth rates delayed reproduction and increased mechanical strength It also influences a plant's ability to transport water resist death mortality rate and manage internal water balance water potential Additionally wood density is closely tied to physiological aspects such as gas exchange and xylem hydraulic conductance which are crucial for nutrient and water movement Wood density is also an important parameter to determine the carbon sequestration capacity of a tree or vegetation thus important in climate change research This proposed book will delve into these fascinating connections highlighting how wood density acts as a key player in shaping the lives of plants and the overall health of forest ecosystems
