Ahlfors Complex Analysis Solutions:

The Numerical Solution of Elliptic Equations Garrett Birkhoff, 1971-01-01 A concise survey of the current state of knowledge in 1972 about solving elliptic boundary value eigenvalue problems with the help of a computer This volume provides a case study in scientific computing the art of utilizing physical intuition mathematical theorems and algorithms and modern computer technology to construct and explore realistic models of problems arising in the natural sciences and engineering

Nevanlinna Theory, Normal Families, and Algebraic Differential Equations Norbert Steinmetz, 2017-07-24 This book offers a modern introduction to Nevanlinna theory and its intricate relation to the theory of normal families algebraic functions asymptotic series and algebraic differential equations Following a comprehensive treatment of Nevanlinna's theory of value distribution the author presents advances made since Hayman's work on the value distribution of differential polynomials and illustrates how value and pair sharing problems are linked to algebraic curves and Briot Bouquet differential equations In addition to discussing classical applications of Nevanlinna theory the book outlines state of the art research such as the effect of the Yosida and Zalcman Pang method of re scaling to algebraic differential equations and presents the Painlevé-Yosida theorem which relates Painlevé transcendents and solutions to selected 2D Hamiltonian systems to certain Yosida classes of meromorphic functions Aimed at graduate students interested in recent developments in the field and researchers working on related problems Nevanlinna Theory Normal Families and Algebraic Differential Equations will also be of interest to complex analysts looking for an introduction to various topics in the subject area With examples exercises and proofs seamlessly intertwined with the body of the text this book is particularly suitable for the more advanced reader

The William Lowell Putnam Mathematical Competition Problems and Solutions Andrew M. Gleason, 1980 Back by popular demand the MAA is pleased to reissue this outstanding collection of problems and solutions from the Putnam Competitions covering the years 1938-1964 Problemists the world over including all past and future Putnam Competitors will revel in mastering the difficulties posed by this collection of problems from the first 25 William Lowell Putnam Competitions Solutions to all 347 problems are given In some cases multiple solutions are included some which contestants could reasonably be expected to find under examination conditions and others which are more elegant or utilize more sophisticated techniques Valuable references and historical comments on many of the problems are presented The book concludes with four articles on the Putnam competition written by G Birkhoff L E Bush L J Mordell and L M Kelly which are reprinted from the American Mathematical Monthly There is great appeal here for all teachers students and all those who love good problems and see them as an entree to beautiful and powerful ideas

Conformal Mappings and Boundary Value Problems Guo-Chun Wen, Translated from the Chinese Conformal mapping and boundary value problems are two major branches of complex function theory The former is the geometric theory of analytic functions and the latter is the analysis theory governing the close relationship between abstract theory and many concrete problems Topics include applications of

Cauchy type integrals the Hilbert boundary value problem quasiconformal mappings and basic boundary value problems for harmonic functions Annotation copyright by Book News Inc Portland OR

Galois Theory of Linear Differential Equations Marius van der Put, Michael F. Singer, 2012-12-06 Linear differential equations form the central topic of this volume Galois theory being the unifying theme A large number of aspects are presented algebraic theory especially differential Galois theory formal theory classification algorithms to decide solvability in finite terms monodromy and Hilbert's 21st problem asymptotics and summability the inverse problem and linear differential equations in positive characteristic The appendices aim to help the reader with concepts used from algebraic geometry linear algebraic groups sheaves and tannakian categories that are used This volume will become a standard reference for all mathematicians in this area of mathematics including graduate students

Gröbner Bases Takayuki Hibi, 2014-01-07 The idea of the Gröbner basis first appeared in a 1927 paper by F. S. Macaulay who succeeded in creating a combinatorial characterization of the Hilbert functions of homogeneous ideals of the polynomial ring Later the modern definition of the Gröbner basis was independently introduced by Heisuke Hironaka in 1964 and Bruno Buchberger in 1965 However after the discovery of the notion of the Gröbner basis by Hironaka and Buchberger it was not actively pursued for 20 years A breakthrough was made in the mid 1980s by David Bayer and Michael Stillman who created the Macaulay computer algebra system with the help of the Gröbner basis Since then rapid development on the Gröbner basis has been achieved by many researchers including Bernd Sturmfels This book serves as a standard bible of the Gröbner basis for which the harmony of theory application and computation are indispensable It provides all the fundamentals for graduate students to learn the ABCs of the Gröbner basis requiring no special knowledge to understand those basic points Starting from the introductory performance of the Gröbner basis Chapter 1 a trip around mathematical software follows Chapter 2 Then comes a deep discussion of how to compute the Gröbner basis Chapter 3 These three chapters may be regarded as the first act of a mathematical play The second act opens with topics on algebraic statistics Chapter 4 a fascinating research area where the Gröbner basis of a toric ideal is a fundamental tool of the Markov chain Monte Carlo method Moreover the Gröbner basis of a toric ideal has had a great influence on the study of convex polytopes Chapter 5 In addition the Gröbner basis of the ring of differential operators gives effective algorithms on holonomic functions Chapter 6 The third act Chapter 7 is a collection of concrete examples and problems for Chapters 4, 5 and 6 emphasizing computation by using various software systems

Semilinear Elliptic Equations Takashi Suzuki, 2020-10-12 This authoritative monograph presents in detail classical and modern methods for the study of semilinear elliptic equations that is methods to study the qualitative properties of solutions using variational techniques the maximum principle blowup analysis spectral theory topological methods etc The book is self-contained and is addressed to experienced and beginning researchers alike

Adaptive Methods for Partial Differential Equations Ivo Babuška, Jagdish Chandra, Joseph E. Flaherty, 1989-01-01 Proceedings of the Workshop on Adaptive Computational Methods for Partial Differential Equations

Rensselaer Polytechnic Institute October 13 15 1988 T p verso

Introduction to Sobolev Spaces and Finite Element Solution of Elliptic Boundary Value Problems Jürg T. Marti, 1986 From the Preface The finite element method is now widely used in many areas of applied mathematics physics and engineering The object of this book is to give a thorough introduction to a number of theoretical fields connected with the finite element method It has developed as a result of various lectures on the analysis of the finite element method taught by the author at the ETH in Zurich Encouraged by the response to these lectures the author feels that the book has become a readable text which can help ordinary mortals to start to understand the theory of finite element methods The reader is assumed to have only an undergraduate background in mathematical analysis

Theory of Reproducing Kernels and Applications Saburo Saitoh, Yoshihiro Sawano, 2016-10-14 This book provides a large extension of the general theory of reproducing kernels published by N Aronszajn in 1950 with many concrete applications In Chapter 1 many concrete reproducing kernels are first introduced with detailed information Chapter 2 presents a general and global theory of reproducing kernels with basic applications in a self contained way Many fundamental operations among reproducing kernel Hilbert spaces are dealt with Chapter 2 is the heart of this book Chapter 3 is devoted to the Tikhonov regularization using the theory of reproducing kernels with applications to numerical and practical solutions of bounded linear operator equations In Chapter 4 the numerical real inversion formulas of the Laplace transform are presented by applying the Tikhonov regularization where the reproducing kernels play a key role in the results Chapter 5 deals with ordinary differential equations Chapter 6 includes many concrete results for various fundamental partial differential equations In Chapter 7 typical integral equations are presented with discretization methods These chapters are applications of the general theories of Chapter 3 with the purpose of practical and numerical constructions of the solutions In Chapter 8 hot topics on reproducing kernels are presented namely norm inequalities convolution inequalities inversion of an arbitrary matrix representations of inverse mappings identifications of nonlinear systems sampling theory statistical learning theory and membership problems Relationships among eigen functions initial value problems for linear partial differential equations and reproducing kernels are also presented Further new fundamental results on generalized reproducing kernels generalized delta functions generalized reproducing kernel Hilbert spaces and as well a general integral transform theory are introduced In three Appendices the deep theory of Akira Yamada discussing the equality problems in nonlinear norm inequalities Yamada's unified and generalized inequalities for Opial's inequalities and the concrete and explicit integral representation of the implicit functions are presented

Elliptic Functions Peter L. Walker, 1996-11-07 The theory of elliptic functions represents a high point of classical analysis Interest in the use of these mathematical tools was recently heightened by John Wile's partial proof of Fermat's Last Theorem Now this comprehensive guide bridges the gap between elementary texts and the very high level specialist research monographs by demonstrating how the principal results can be derived using relatively modest analytical machinery In addition to their intrinsic elegance and range from Circular
