High-voltage USB-PC power switch

Rev. 1 — 04 October 2018

Product data sheet

## 1. General description

The NX20P5090 is an advanced 5 A synchronous power switch for USB PD. It includes under-voltage lockout, over-voltage lockout, reverse-current protection and over-temperature protection circuits. It is designed to automatically lock the power path terminals when a fault condition occurs. Both VBUS and GND pins have PD 7.5 connectors in standard mode. Two NX20P5090 chips can be interconnected to support dual power inputs connecting to the same charging source.

The device has a default 30 V over-voltage protection threshold and the OVP threshold can be adjusted by using an external resistor divider on DPA0 pin. It is made because there is a delay every time before the device is switched ON. Otherwise, it will lead to over the switch current.

Designed for operation from 0.5 V to 5.5 V, it is used in USB PD power control applications to offer excellent protection and enhance system reliability.

NX20P5090 is offered in a small 10 pins, 2.00 x 1.20 x 0.50 mm WLCSP package.
