spatially localized scales From the point of view of characterization it is worth mentioning advances in the interpretation of
processes in semiconductors the ability to observe and manipulate metal carbon and silicon nanowires and nanodots and
studies in molecular self assembly The papers in this book fall into two categories those addressing classes of
characterization techniques that emphasize how the combination of theoretical experimental and instrumental
developments lead to new capabilities in nanoscale characterization and those focused on the use of various spatially
localized approaches on a single phenomenon or materials issue Topics include characterization with electron optics novel
measurements of nanoscale properties size dependent behavior of nanoparticles biological systems at the nanoscale
processing and properties of nanowires and heterostructures and local phenomena in materials and microstructures
