The 26 papers presented in this volume were carefully reviewed and selected from 98 submissions. They are organized in topical sections named: lattices, discrete logarithms, stream ciphers, and authenticated encryption, post-quantum hash-based and system solving, white-box crypto, block ciphers, elliptic curves, pairings, and RSA, hash functions and MACs, and side-channel attacks. The book also contains 3 full-length invited talks. **Metaverse Datafication** Chris Hesselbein, Paolo Bory, Stefano Canali, 2026-05-04 This book explores the most pressing questions and concerns that are emerging in tandem with the development of metaverse platforms and technologies. It focuses on the central question of how the gallop towards bigger and richer data will extend and intensify current drives towards datafication and commodification. The volume draws on different disciplines in the social sciences and humanities, including science and technology studies, critical data studies, communication and media studies, and cultural studies, as well as philosophy and political science, to offer a range of complementary perspectives. The essays combine conceptual reflection, as well as empirical engagement, with the topic of metaverse datafication and its political, infrastructural, and social implications. Key focal points include analysis of the corporate narratives that drive the current development of metaverse platforms and technologies, the computational infrastructures and material resources that enable metaverse technologies, the reconfiguration or even subversion of state power, global markets, and regulatory frameworks, the impact of metaverse practices and data on social life and personal identity, and the role that these developments play for academic research and our conceptualisation of knowledge.
