Chemical Mutagenesis:

Chemical Mutagens Alexander Hollaender, 2012-12-06 The ready acceptance and wide demand for copies of the first two volumes of *Chemical Mutagens Principles and Methods* and *Their Detection* have demonstrated the need for wider dissemination of information on this timely and urgent subject Therefore it was imperative that a third volume be prepared to include more detailed discussions on techniques of some of the methods that were presented from a theoretical point of view in the first two volumes and to update this rapidly expanding field with current findings and the new developments that have taken place in the past three years Also included is a special chapter by Dr Charlotte Auerbach giving the historical background of the discovery of chemical mutagenesis Methods for recognizing mutagenic compounds in vitro are a necessary preliminary step toward arriving at satisfactory solutions for recognizing significant mutation rates in man which must be done before our test tube methods of detection can be considered reliable Two chapters in this volume make important contributions to this problem Due to the increasing activity in efforts to perfect techniques for detecting chemical mutagens and their effects on man it is planned to continue this series of volumes as necessary to keep abreast of current findings

Chemical Mutagens Environmental Effects on Biological Systems L Fishbein, 2012-12-02 Chemical Mutagens Environmental Effects on Biological Systems brings together relevant facts about synthetic and naturally occurring mutagenic chemicals Organized into two parts this book begins with a simple discussion on the modern concepts of the gene at the molecular and biochemical levels The first part also looks into the different types of mutations and how they form as well as the biological systems used for their detection The second part deals with the individual chemical mutagens of environmental significance including their manufacture occurrence method of detection degradation and metabolism It also discusses the types of mutation chemical mutagens induce in the various test systems that have been utilized This book will serve as single source material for its utility to students investigators and those involved with public health

Chemical Carcinogenesis and Mutagenesis II Colin S. Cooper, Philip L.

Grover, 1990-01-31 I have been privileged to witness and participate in the great growth of knowledge on chemical carcinogenesis and mutagenesis since 1939 when I entered graduate school in biochemistry at the University of Wisconsin Madison I immediately started to work with the carcinogenic aminoazo dyes under the direction of Professor CARL BAUMANN In 1942 I joined a fellow graduate student ELIZABETH CAVERT in marriage and we soon commenced a joyous partnership in research on chemical carcinogenesis at the McArdle Laboratory for Cancer Research in the University of Wisconsin Medical School in Madison This collaboration lasted 45 years I am very grateful that this volume is dedicated to the memory of Elizabeth The important and varied topics that are reviewed here attest to the continued growth of the fields of chemical carcinogenesis and mutagenesis including their recent and fruitful union with viral oncology I feel very optimistic about the application of knowledge in these fields to the eventual solution of numerous problems including the detection and estimation of the risks to humans of environmental chemical carcinogens and related factors

Hollaender, 2012-12-06 As editor I want especially to thank Dr Ernst Freese for helpful cooperation in preparing these volumes and to express my appreciation to Drs Kurt Hirschhorn and Marvin Legator the other members of the editorial board Alexander Hollaender January 1971 Preface The purpose of these volumes is to encourage the development and application of testing and monitoring procedures to avert significant human exposure to mutagenic agents The need for protection against exposure to possibly mutagenic chemicals is only now coming to be generally realized The recently issued Report of the Secretary's Commission on Pesticides and Their Possible Effects on Health the Mark Report U S Department of Health Education and Welfare December 1969 has made an important start Its Panel on Mutagenicity recommends that all currently used pesticides be tested for mutagenicity in several recently developed and relatively simple systems Whether recommendations such as these are actually put into effect will depend on convincing government industry and the public that the problem is important that the proposed tests would be effective and that they can be conducted at a cost that is not
