Nvidia Gpu Review Setup:

Machine Learning with LightGBM and Python Andrich van Wyk, 2023-09-29 Take your software to the next level and solve real world data science problems by building production ready machine learning solutions using LightGBM and Python

Key Features Get started with LightGBM a powerful gradient boosting library for building ML solutions Apply data science processes to real world problems through case studies Elevate your software by building machine learning solutions on scalable platforms Purchase of the print or Kindle book includes a free PDF eBook Book Description

Machine Learning with LightGBM and Python is a comprehensive guide to learning the basics of machine learning and progressing to building scalable machine learning systems that are ready for release This book will get you acquainted with the high performance gradient boosting LightGBM framework and show you how it can be used to solve various machine learning problems to produce highly accurate robust and predictive solutions Starting with simple machine learning models in scikit learn you ll explore the intricacies of gradient boosting machines and LightGBM You ll be guided through various case studies to better understand the data science processes and learn how to practically apply your skills to real world problems As you progress you ll elevate your software engineering skills by learning how to build and integrate scalable machine learning pipelines to process data train models and deploy them to serve secure APIs using Python tools such as FastAPI By the end of this book you ll be well equipped to use various of the art tools that will help you build production ready systems including FLAML for AutoML PostgresML for operating ML pipelines using Postgres high performance distributed training and serving via Dask and creating and running models in the Cloud with AWS Sagemaker What you will learn Get an overview of ML and working with data and models in Python using scikit learn Explore decision trees ensemble learning gradient boosting DART and GOSS Master LightGBM and apply it to classification and regression problems Tune and train your models using AutoML with FLAML and Optuna Build ML pipelines in Python to train and deploy models with secure and performant APIs Scale your solutions to production readiness with AWS Sagemaker PostgresML and Dask Who this book is for This book is for software engineers aspiring to be better machine learning engineers and data scientists unfamiliar with LightGBM looking to gain in depth knowledge of its libraries Basic to intermediate Python programming knowledge is required to get started with the book The book is also an excellent source for ML veterans with a strong focus on ML engineering with up to date and thorough coverage of platforms such as AWS Sagemaker PostgresML and Dask

Hands-On Large Language Models Jay Alammar, Maarten Grootendorst, 2024-09-11 AI has acquired startling new language capabilities in just the past few years Driven by the rapid advances in deep learning language AI systems are able to write and understand text better than ever before This trend enables the rise of new features products and entire industries With this book Python developers will learn the practical tools and concepts they need to use these capabilities today You ll learn how to use the power of pre trained large language models for use cases like copywriting and summarization create semantic search systems that go beyond

keyword matching build systems that classify and cluster text to enable scalable understanding of large amounts of text documents and use existing libraries and pre trained models for text classification search and clusterings This book also shows you how to Build advanced LLM pipelines to cluster text documents and explore the topics they belong to Build semantic search engines that go beyond keyword search with methods like dense retrieval and rerankers Learn various use cases where these models can provide value Understand the architecture of underlying Transformer models like BERT and GPT Get a deeper understanding of how LLMs are trained Understanding how different methods of fine tuning optimize LLMs for specific applications generative model fine tuning contrastive fine tuning in context learning etc

Generative AI with Kubernetes Jonathan Baier, 2025-02-28

DESCRIPTION Over the past few years we have seen leaps and strides in ML and most recently generative AI Companies and software teams are rushing to enhance rebuild and create new software offerings with this new intelligence As they innovate and create delightful new experiences for their customers new challenges arise Understanding how these applications work and how to use state of the art infrastructure tools like Kubernetes will help organizations and professionals succeed with this new technology The book covers essential technical implementations from ML fundamentals through advanced deployment strategies focusing on practical patterns Core topics include Kubernetes native GPU scheduling and resource management MLOps pipeline architectures using Kubeflow MLflow and advanced model serving patterns It details data management architectures vector databases and RAG systems alongside monitoring solutions with Prometheus Grafana Finally we will look at some advanced concerns for production in the realm of security and data reliability After reading this book you will be equipped with a broad knowledge of the end to end generative AI pipeline and how Kubernetes can be leveraged to run your generative AI workloads at scale in the real world

KEY FEATURES Learn how Kubernetes can help you run your generative AI workloads Using hands on examples you will work with real world foundational models and a variety of tools and capabilities in the K8s ecosystem A broad survey of both generative AI and Kubernetes in one book

WHAT YOU WILL LEARN How to evaluate and compare models for new applications and use cases How Kubernetes can add reliability and scale to your AI applications What does an AI delivery pipeline contain and how to start one How AI models encode words and work with natural language How prompting and refinement techniques can improve results How to use your own data to augment AI responses

WHO THIS BOOK IS FOR This book is for teams building new applications or new functionality with generative AI but want to better understand the infrastructure needed to bring their AI applications to production This book is also for shared services infrastructure or cybersecurity teams who provide platforms and infrastructure for application or product development

TABLE OF CONTENTS
