Annual Review of Information Science & Technology Blaise Cronin, 2006-10 ARIST published annually since 1966 is a landmark publication within the information science community. It surveys the landscape of information science and technology providing an analytical, authoritative, and accessible overview of recent trends and significant developments. The range of topics varies considerably, reflecting the dynamism of the discipline and the diversity of theoretical and applied perspectives. While ARIST continues to cover key topics associated with classical information science (e.g., bibliometrics, information retrieval), editor Blaise Cronin is selectively expanding its footprint in an effort to connect information science more tightly with cognate academic and professional communities. *NETWORKING 2002: Networking Technologies, Services, and Protocols; Performance of Computer and Communication Networks; Mobile and Wireless Communications* Enrico Gregori, Marco Conti, Andrew T. Cambell, Guy Omidyar, Moshe Zukerman, 2007-06-30 This book constitutes the refereed proceedings of the Second IFIP TC6 Networking Conference. Networking 2002 was sponsored by the IFIP Working Groups 6.2, 6.3, and 6.8. For this reason, the conference was structured into three tracks: i) Networking Technologies, Services, and Protocols; ii) Performance of Computer and Communication Networks; and iii) Mobile and Wireless Communications. This year, the conference received 314 submissions coming from 42 countries from all five continents: Africa 4, Asia 84, America 63, Europe 158, and Oceania 5. This represents a 50% increase in submissions over the first conference, thus indicating that Networking is becoming a reference conference for worldwide researchers in the networking community. With so many papers to choose from, the job of the Technical Program Committee to provide a conference program of the highest technical excellence was both challenging and time-consuming. From the 314 submissions, we finally selected 82 full papers for presentation during the conference technical sessions. To give young researchers and researchers from emerging countries the opportunity to present their work and to receive useful feedback from participants, we decided to include two poster sessions during the technical program. Thirty-one short papers were selected for presentation during the poster sessions. The conference technical program was split into three days and included, in addition to the 82 refereed contributions, 5 invited papers from top-level researchers in the networking community. **The Internet as a Large-scale Complex System** Kihong Park, Walter Willinger, 2005 This volume contains a snapshot of some features of the Internet that may be fruitfully approached using a complex systems perspective, meaning using interdisciplinary tools and methods to tackle the subject area. *Proceedings*, 2003 **Annual Review of Communications: Volume 59** International Engineering Consortium, 2007 An indispensable reference publication for telecommunication and information industry professionals.
