Hybrid Feedback Control Ricardo G. Sanfelice, 2021-01-12 Hybrid systems are those that unlike classical systems exhibit both discrete changes or jumps and continuous changes or flow The canonical example of a hybrid system is a bouncing ball the ball's speed changes continuously between bounces but there is a discrete jump in velocity each time the ball impacts the ground Hybrid systems feature widely across disciplines including in biology computer science and mechanical engineering examples range from fireflies to self driving cars Although classical control theory provides powerful tools for analyzing systems that exhibit either flow or jumps it is ill equipped to handle hybrid systems which feature both behaviors In *Hybrid Feedback Control* Ricardo Sanfelice presents a self contained introduction to the control of hybrid systems and develops new tools for their design and analysis This monograph uses hybrid systems notation to present a new unified control theory framework thus filling an important gap in the control theory literature In addition to presenting this theoretical framework the book also includes a variety of examples and exercises a Matlab toolbox and a summary at the beginning of each chapter The book was originally used in a series of lectures on the topic and will find a modest amount of crossover course use The

book will also find use outside the field of control particularly in dynamical systems theory applied mathematics and computer science
