

SAT Science Reading Test Prep Passage: Physics – Properties of Waves

The study of waves forms a critical part of physics, encompassing a range of phenomena from sound waves to electromagnetic waves. Two fundamental properties of waves are their frequency and wavelength, which are intrinsically linked to their speed and energy. The frequency of a wave refers to the number of wave cycles that pass a point per unit of time, while the wavelength is the distance between successive crests or troughs of a wave.

Two research groups conducted independent studies to understand how different mediums and frequencies affect the properties of waves. The first group, led by Dr. Aria, focused on sound waves and how their speed varied in different mediums. The second group, led by Dr. Hertz, investigated the relationship between the frequency of light waves and their energy.

Table 1: Speed of Sound in Different Mediums (Research by Dr. Aria)

Medium	Speed of Sound (m/s)
Air	343
Water	1482
Steel	5940

Table 2: Frequency and Energy of Light Waves (Research by Dr. Hertz)

Frequency (Hz)	Energy (Joules)
2×10^{14}	3.2×10^{-19}
4×10^{14}	6.4×10^{-19}
8×10^{14}	1.28×10^{-18}

Dr. Aria's research demonstrates that sound waves travel faster in denser mediums, while Dr. Hertz's findings illustrate a direct relationship between the frequency and energy of light waves. These studies help in understanding how different properties of waves behave under various conditions.
