Model	No. Cyls.	Bore	Stroke	Displ.
DVA1500	2	92 mm (3.622 in.)	83 mm (3.465 in.)	1765 cc (107 cu. in.)

The DVA1500 engine is a four-stroke, air-cooled, direct injection diesel with vertical inline cylinders. Crankshaft rotation is counterclockwise at flywheel end.

MAINTENANCE

LUBRICATION

Recommended engine oil is SAE 20W-20 for temperatures below 0°C (32°F). When ambient temperature will be above 0°C (32°F), use SAE 30 for winter operation or SAE 40 for summer operation. Only premium grade, heavy-

duty, diesel engine oil meeting API CC specifications should be used.

Under normal operating conditions, manufacturer recommends changing engine oil after every 200 hours of operation. When operating under severe duty conditions, such as high temperature and heavy load, oil should be changed after every 100 hours of operation. Oil should be drained while the engine is hot. Manufacturer recommends renewing the oil filter element after every 400

hours of operation. Crankcase capacity is approximately 4 liters (4.3 quarts) without filter change and 4.6 liters (4.9 quarts) with filter change.

The engine oil pressure relief valve assembly is located in the oil filter adapter housing (9 - Fig. S2-1). Pressure setting is adjustable using screw (4).

FUEL SYSTEM

FUEL FILTER AND BLEEDING. Manufacturer recommends renewing the fuel filter element after every 200 hours of operation. However, if engine indicates signs of fuel starvation (surging or loss of power), filter should be renewed regardless of hours of operation. After renewing fuel filter, air must be bled from the fuel system.

NOTE: A plastic filter screen is located in fuel transfer pump inlet. If engine fails to run properly after main fuel filter element has been renewed, inspect for plugged pump filter screen.

To bleed air from fuel system, loosen bleed screw (11 - Fig. S2-2) on fuel filter mounting base. Operate fuel transfer pump manually until air-free fuel flows from bleeder, then retighten screw. Loosen bleed screw (4) at injection pump fuel inlet. Operate fuel transfer pump until fuel flows from bleeder, then retighten screw. Continue to actuate transfer pump until resistance is felt to pressurize system.

If engine fails to start at this point, loosen high pressure fuel line (10) fittings at the injectors. Set throttle control in full speed position. Actuate decompression lever, then crank engine until fuel is discharged from loosened fuel lines. Retighten fittings and start engine.

ENGINE SPEED ADJUSTMENT

Engine should be at normal operating temperature when adjusting engine speeds. Low and high idle (no-load) speeds are adjusted using the throttle lever stop screws located on top of governor cover. If necessary, adjust screws to obtain specified governed speed as required for engine application.
