Venkatesha Murthy,2009-09-18 The present volume is a collection of papers mainly concerning Phase Space Analysis also known as Microlocal Analysis and its application to the theory of Partial Differential Equations PDEs The basic idea behind this theory at the crossing of harmonic analysis functional analysis quantum mechanics and algebraic analysis is that many phenomena depend on both position and frequency or wave numbers or momentum and therefore must be understood and described in the phase space Including time and its dual variable the energy leads to the space-time phase space From this perspective major progress has been achieved in the analysis of PDEs over the last forty years based on the development of powerful tools of microlocal analysis A number of the following papers all written by leading experts in their respective fields are expanded versions of talks given at a meeting held in October 2007 at the Certosa di Pontignano a former 1400 cloister sprawling on the hills surrounding Siena The Siena workshop was in honor of Ferruccio Colombini on the occasion of his 60th birthday and it is our pleasure to dedicate to him this volume to which a number of friends and collaborators promptly manifested their willingness to contribute In this sense the present volume can be seen as a scientific portrait of Ferruccio Many people deserve our gratitude We would like to thank all the contributors as well as the people who took part in the workshop who made a lively mathematical attendance
