Non-linear Vibrational System Arjun Pradeep Kumar, 2017 Frequency sweep problems occur in several applications of structural dynamics acoustics and structural acoustics In general the evaluation of a frequency response function involves finding solution to a large scale system of coupled equations defining a vast system Hence finding solutions to frequency response functions for a large range of frequencies is computationally exhaustive However the established method of interpolation techniques can be implemented to reduce the cost of computation So far several techniques of interpolation techniques have been successfully implemented in systems involving large scale coupled linear equations This thesis proposes implementation of Pads interpolation technique in a large scale nonlinear system More specifically this thesis

focuses on the additional computational efforts required in finding solution to frequency sweep problems of large nonlinear systems when compared with large linear systems The accuracy and computational efficiency of the mentioned approach are demonstrated with solutions to frequency sweep problems for a single and two degrees of freedom of nonlinear systems Further this thesis has discussed methods to approach solution of frequency response problem of a multi degree of freedom nonlinear system using finite element method *Frequency Response [symposium] ,1954*
