Using the Engineering Literature Bonnie A. Osif,2016-04-19 With the encroachment of the Internet into nearly all aspects of work and life it seems as though information is everywhere However there is information and then there is correct appropriate and timely information While we might love being able to turn to Wikipedia for encyclopedia like information or search Google for the thousands of links *Encyclopedia of Transportation* Mark Garrett,2014-08-13 Viewing transportation through the lens of current social economic and policy aspects this four volume reference work explores the topic of transportation across multiple disciplines within the social sciences and related areas including geography public policy business and economics Features Approximately 675 signed articles authored by prominent scholars are arranged in A to Z fashion and conclude with Further Readings and cross references A Chronology helps readers put individual events into historical context a Reader s Guide organizes entries by broad topical or thematic areas a detailed index helps users quickly locate entries of most immediate interest and a Resource Guide provides a list of journals books and associations and their websites While articles were written to avoid jargon as much as possible a Glossary provides quick definitions of technical terms To ensure full well rounded coverage of the field the General Editor with expertise in urban planning public policy and the environment worked alongside a Consulting Editor with a background in Civil Engineering The index Reader s Guide and cross references combine for thorough search and browse capabilities in the electronic edition Available in both print and electronic formats Encyclopedia of Transportation is an ideal reference for libraries and those who want to explore the issues that surround transportation in the United States and around the world Key Themes Administration Operations and Evaluation Air Transportation Systems Economics of Transportation Energy Environmental and Health Impacts Facilities and Infrastructure Intermodal Transportation Systems International Transportation and Policy Labor Issues Employee Relations Planning and Policy Safety and Security Social Issues in Transportation Surface Transportation Systems Technology Design and Engineering Transportation Finance of Transportation Legislation Transportation Modeling Transportation Organizations and Agencies Travel Behavior and Research Water Transportation Systems **Green Infrastructure** Rohana Hassan,Nor Hayati Abdul Hamid,Ahmad Kamil Arshad,Anizahyati Alisibramulisi,Muhd Norhasri Muhd Sidek,Norshariza Mohamad Bhkari,Ekarizan Shaffie,2021-12-05 This book presents the meaning of green infrastructure and its concerns to the contribution of materials and applications It explores the evolving contested material under green infrastructure covering timber concrete soil and pavement It discusses the resistance to the ambiguity of managing the construction of green infrastructure and drawing on wider debates around applications and processes on construction These contributions are by no means definitive but rather an attempt to provide a detached and holistic perspective on the engineering green infrastructure concept **Nodes in Transport Networks - Research, Data Analysis and Modelling** Elżbieta Macioszek,Nan Kang,Grzegorz Sierpiński,2020-01-06 The publication delivers numerous valuable guidelines particularly

useful when making decisions related in the subject matter to road and rail nodes located in dense transport networks The know how displayed while discussing practical examples as well as the decision making support systems described in the publication will certainly attract the interest of those who daily face the challenge of seeking solutions to the operational and functional problems of transport nodes in contemporary transport networks and systems This publication is dedicated to local authorities involved in planning and preparation of development strategies for specific transport related issues in both urban and regional areas as well as to representatives of business and industry being those who participate directly in the implementation of traffic engineering solutions The guidelines provided in individual chapters of the publication will make it possible to address the given problem in an advanced manner and simplify the choice of appropriate strategies including those related to synchronisation of road traffic streams improving the capacity road traffic safety analysis evaluation of changes in drivers behaviour on account of introducing countdown timers at signal controlled intersections using UAV data the influence of the type of traffic organisation on the behaviour of pedestrians at tram line crossings On the other hand since the publication also concerns the new approach to theoretical models including potential places of integration of public transport with the railway network or the speed adviser for pedestrians enabling them to choose the optimal path at signal controlled intersections it should also attract the attention of researches and scientists studying this body of problems The publication entitled Nodes in transport networks research data analysis and modelling contains selected papers submitted to and presented at the 16th Transport Systems Theory and Practice Scientific and Technical Conference organized by the Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology The conference was held on 16-18 September 2019 in Katowice Poland

**Development of Safety-based Level-of-service Criteria for Isolated-signalized Intersections** Tae-Jun Ha, 1994 *Traffic Engineering*, 1975

**Safety Performance Functions for Intersections on Highways Maintained by the Virginia Department of Transportation** Nicholas J. Garber, 2010 In recent years significant effort and money have been invested through research and implemented safety projects to enhance highway safety in Virginia However there is still substantial room for improvement in both crash frequency and severity As there are limits in the available funds for safety improvements it is crucial that allocated resources for safety improvement be spent at highway locations that will result in the maximum safety benefits In addition intersection crashes play a significant role in the safety conditions in Virginia For example crashes at intersections in Virginia for the period 2003 through 2007 account for 43.8% of all crashes and 26% of fatal crashes Therefore identifying intersections for safety improvements that will give the highest potential for crash reduction when appropriate safety countermeasures are implemented will have a significant impact on the overall safety performance of roads in Virginia The Federal Highway Administration FHWA has developed a procedure for identifying highway locations that have the highest potential for crash reduction ITT Corporation 2008 A critical component of this method is the use of safety performance functions SPFs to determine the potential for crash reductions at a location An SPF is a mathematical relationship model between frequency of crashes by severity and the most significant causal factors on a specific highway Although the SafetyAnalyst User's Manual presents several SPFs for intersections these were developed using data from Minnesota FHWA also suggested that if feasible each state should develop its own SPFs based on crash and traffic volume data from the state as the SPFs that are based on Minnesota data may not adequately represent the crash characteristics in all states SPFs for intersections in Virginia were developed using the annual average daily traffic as the most significant causal factor emulating the SPFs currently suggested by SafetyAnalyst The SPFs were developed for both total crashes and combined fatal plus injury crashes through generalized linear modeling using a negative binomial distribution Models were also developed for urban and rural intersections separately and in order to account for the different topographies in Virginia SPFs were also developed for three regions Northern Western and Eastern This report covers Phases I and II of the study which includes urban and rural intersections maintained by VDOT Statistical comparisons of the models based on Minnesota data with those based on the Virginia data showed that the specific models developed for

Virginia fit the Virginia crash data better The report recommends that VDOT's Traffic Engineering Division use the SPFs developed for Virginia and the specific regional SPFs suggested in this report to prioritize the locations in need of safety improvement

**Airport Offsite Passenger Service Facilities** Arkopal K. Goswami, 2009 Offsite airport facilities provide ground transportation baggage and passenger check in and other transportation services to departing air passengers from a remote location The purpose of this study was to develop models to determine the airports that might be candidates for such a facility and estimate the percentage of travelers that would choose to use one to access the airport Offsite airport facility operations were examined in New York Los Angeles Zurich London and Hong Kong and passenger data were obtained from surveys distributed at six U S airports A total of 1 700 air traveler questionnaires were completed at four airports without offsite facilities i e Baltimore Washington International Thurgood Marshall Airport BWI Charlottesville Albemarle Airport CHO Norfolk International Airport ORF and Richmond International Airport RIC and at two airports with offsite facilities that provide ground transportation only i e Boston Logan International Airport BOS and San Francisco International Airport SFO The survey results show that 68% of passengers who traveled directly to the airport terminal would consider using an offsite airport facility if available Of the passengers who currently use an offsite airport facility that provides only ground transportation almost 70% indicated that their access would be improved by expanded services including baggage and passenger check in The two main reasons cited for using the offsite airport facilities surveyed in this study were reduced travel time variability 43% and lower cost 39% With the data collected at the six airports two models were developed sequentially to determine the demand for offsite facilities The airport access quality model was used to establish initial demand by assuming that the likelihood of a viable offsite facility is directly proportional to the difficulty or resistance encountered during the current access trip to the airport This model yielded expected results when tested with a former offsite airport facility The offsite facility usage model was used to determine the probability of passengers using an offsite facility while accessing an airport and accurately estimated 58% of the test set responses The airport access quality model develops a value for total resistance and ranks the airports according to the current difficulty encountered by passengers during their access trip to the airport When applied to three Virginia airports passengers accessing RIC had the largest total resistance Accordingly RIC is considered to have the highest potential demand for an offsite facility The offsite airport facility usage model was based on flight departure time and variability in ground travel time as predictors of the final demand For example the model estimated an offsite airport facility demand of 74% for passengers departing between 8 and 10 30 A M

when ground travel times vary by 45 min rounded to the nearest 15 min interval For passengers departing before 8 00 A M and with a ground travel time that varies by no more than 5 min the models estimated demand at only 26% The offsite airport facility usage model was also used to identify the zones defined by zip codes where potential use of offsite terminals is substantial Handbook of Transportation Engineering Volume II, 2e Myer Kutz, 2011-03-08 The definitive transportation engineering resource fully revised and updated The two volume Handbook of Transportation Engineering Second Edition offers practical comprehensive coverage of the entire transportation engineering field Featuring 18 new chapters and contributions from nearly 70 leading experts this authoritative work discusses all types of transportation systems freight passenger air rail road marine and pipeline and provides problem solving engineering planning and design tools and techniques with examples of successful applications Volume II focuses on applications in automobile and non automobile transportation and on safety and environmental issues VOLUME II COVERS Traffic engineering analysis Traffic origin destination estimation Traffic congestion Highway capacity Traffic control systems freeway management and communications Traffic signals Highway sign visibility Transportation lighting Geometric design of streets and highways Intersection and interchange design Pavement engineering flexible and rigid pavements Pavement testing and evaluation Bridge engineering Tunnel engineering Pedestrians Bicycle transportation Spectrum of automated guideway transit AGT and its applications Railway vehicle engineering Railway track design Improvement of railroad yard operations Modern aircraft design techniques Airport design Air traffic control systems design Ship design Pipeline engineering Traffic safety Transportation hazards Hazardous materials transportation Incident management Network security and survivability Optimization of emergency evacuation plans Transportation noise issues Air quality issues in transportation Transportation and climate change
