Data-Driven Optimization of Manufacturing Processes Kalita, Kanak, Ghadai, Ranjan Kumar, Gao, Xiao-Zhi, 2020-12-25 All machining processes are dependent on a number of inherent process parameters. It is of the utmost importance to find suitable combinations to all the process parameters so that the desired output response is optimized. While doing so may be nearly impossible or too expensive by carrying out experiments at all possible combinations, it may be done quickly and efficiently by using computational intelligence techniques. Due to the versatile nature of computational intelligence techniques, they can be used at different phases of the machining process design and optimization process. While powerful machine learning methods like genetic programming, GEP, artificial neural network, ANN, support vector regression, SVM, and more can be used at an early phase of the design and optimization process to act as predictive models for the actual experiments, other metaheuristic-based methods like cuckoo search, ant colony optimization, particle swarm optimization, and others can be used to optimize these predictive models to find the optimal process parameter combination. These machining and optimization processes are the future of manufacturing. **Data-Driven Optimization of Manufacturing Processes** contains the latest research on the application of state-of-the-art computational intelligence techniques from both predictive modeling and optimization viewpoints in both soft computing approaches and machining processes. The chapters provide solutions applicable to machining or manufacturing process problems and for optimizing the problems involved in other areas of mechanical, civil, and electrical engineering, making it a valuable reference tool. This book is addressed to engineers, scientists, practitioners, stakeholders, researchers, academicians, and students interested in the potential of recently developed powerful computational intelligence techniques towards improving the performance of machining processes.

Precision Forming Technology of Large Superalloy Castings for Aircraft Engines Baode Sun, Jun Wang, Da Shu, 2021-02-06 This book describes systematically the theory and technology of the precision forming of large complex and thin-walled superalloy castings for aircraft engines, covering all the important basic aspects of the manufacturing process, including process design, wax pattern, ceramic molds, casting and solidification, heat treatment, repair casting, and dimension precision control. The correlation of casting defects, structural characteristics, and performance of castings is revealed through a range of tests. It also discusses the latest technologies and advances in this field, such as imaging the solidification process by means of synchrotron radiography, 3D computerized tomography, and reconstruction of microporosity defects analysis and diagnosis of error sources for dimension over tolerance and adjusted pressure casting technology, which are of particular interest. Providing essential insights, the book offers a valuable guide to the design and manufacture of superalloy casting parts for aircraft engines. *American Foundryman*, 1955 **Modern Castings**, 1948 *Relationship Between Solidification Parameters and Casting Defects* Carlos M.
