Multiple Choice Questions

- Adam Smith's invisible hand only leads to an efficient outcome when:
 - buyers are fully informed about all relevant aspects of a product and the market in which it is traded.
 - buyers collect information up to the point at which the marginal cost of having more information equals the marginal benefit of having more information.
 - buyers have more information about the product being traded than do sellers.
 - buyers have less information about the product being traded than do sellers.
- Information about the quality of a product is:
 - intangible, and therefore not subject to economic principles.
 - impossible to objectively assess, and therefore not subject to economic principles.
 - both beneficial to have and costly to obtain, and therefore subject to economic principles.
 - subject to economic principles only when it is paid for, for example by subscribing to *Consumer Reports* or by hiring a financial advisor.
- According to the textbook, middlemen:
 - add no value to economic activity.
 - only add value if the consumer gets a good deal.
 - only add value to themselves.
 - provide value through information and coordination.
- Sydney sells snow globes from a cart. When the cart is located on the sidewalk near a discount store, Sydney's customers have reservation prices of \$5. When Sydney's cart is located on a sidewalk in an upscale mall, wealthier customers with reservation prices of \$10 buy snow globes. Assume that Sydney can sell the same volume at either location and that marginal and average costs are \$3 per globe at both locations. Total economic surplus will be maximized if Sydney:
 - alternates between the two locations and price discriminates.
 - sells only near the discount store and charges \$5.
 - sells only in the upscale mall and charges \$10.
 - alternates between the two locations and charges \$5 at both locations.
- Sydney sells snow globes from a cart. When the cart is located on the sidewalk near a discount store, Sydney's customers have reservation prices of \$5. When Sydney's cart is located on a sidewalk in an upscale mall, wealthier customers with reservation prices of \$10 buy snow globes. Assume that Sydney can sell the same volume at either location and that marginal and average costs are \$3 per globe at both locations. Information about the reservation prices of Sydney's customers increases total surplus by:
 - allowing consumers with different incomes to acquire things they value.
 - helping to ensure that snow globes go to consumers who like them most.
 - encouraging sellers to locate in underserved areas.
 - helping to ensure that snow globes go to consumers with the greatest willingness to pay.
- Better information about consumers' reservation prices generally leads to:
 - a reduction in consumer surplus.
 - acquisition of goods by consumers who are willing to pay the highest price.
 - equitable distribution of goods among low income consumers.
 - acquisition of goods by consumers with the greatest need.
- When auctions, such as those used on eBay, are used to sell a product, then:
 - information about consumers' true reservation prices is minimized.
 - information about consumers' true reservation prices is revealed.
 - consumers have an incentive to bid above their true reservation prices.
 - consumers have an incentive to bid below their true reservation prices.
