

Chapter 11 Introduction to Genetics

Section Review 11-1

Reviewing Key Concepts

Short Answer On the lines provided, answer the following questions.

1. State Mendel's principle of dominance.

Mendel's principle of dominance states that some alleles are dominant + others are recessive.

2. Which two combinations of alleles could produce a trait controlled by a dominant allele?

A + trait if there are 2 dominant or 1 dominant + 1 recessive alleles present.

3. What combination of alleles could produce a trait controlled by a recessive allele?

A + trait controlled by a recessive allele will be produced only when 2 recessive alleles are present.

4. Explain segregation of alleles, using pea plant traits in your example.

Segregation is the process during gamete formation in which the two alleles are separated from each other so that each gamete carries only a single copy of each gene.

Reviewing Key Skills

5. Applying Concepts Explain how Mendel's experiments would have been different if he had not worked with true-breeding plants.

True breeding plants allowed Mendel to pinpoint the cause of variation in traits b/c he could control which plants bred. w/o true-breeding plants, Mendel would not have been able to draw his conclusion b/c there would be too many variables.

6. Comparing and Contrasting Explain the difference between cross-pollination and self-pollination in plants.

Cross-pollination is the process of one plant fertilizing another, while self-pollination occurs when a plant fertilizes itself.

7. Calculating One fourth of the plants resulting from a certain cross are expected to show a trait controlled by a recessive allele. If 675 plants resulting from the cross display a trait controlled by a dominant allele, how many plants will show the trait controlled by the recessive allele?

225 plants will show the trait controlled by the recessive allele.

8. Applying Concepts If one of the plants used in the F_1 cross had TT alleles and was combined with a plant with Tt alleles, would the trait controlled by the recessive allele have been produced in the resulting F_2 generation? Explain your answer.

The trait controlled by the recessive allele would not have been produced in the resulting F_2 generation. Both F_1 generation plants need to have Tt allele combinations for the trait controlled by the recessive allele to be produced in one of the F_2 generation plants.

Laboratory Manual of Genetics A. M. Winchester, Peter J. Wejksnora, 1995-12 Give your students the opportunity to apply the scientific method to real not simulated lab investigations in both classical and molecular genetics It is appropriate for a range of genetics and molecular biology laboratory courses because it incorporates material spanning the areas of basic genetics molecular

genetics and human genetics Since the first edition *Laboratory Manual of Genetics* has been carefully constructed to be student oriented *Student Workbook for Essentials of Anatomy and Physiology* Valerie C. Scanlon, Tina Sanders, 1998-10 The ideal companion to *Essentials of Anatomy and Physiology* 5th Edition or as a stand alone study tool **Introduction to Psychology** Dennis Coon, 1998-08 In this revitalized redesigned and thoroughly updated Eighth Edition of his best selling text Dennis Coon once again presents psychology in a way readers will find fascinating relevant and above all accessible Professors and readers alike have found Coon's text not only interesting and easy to read but exceptionally easy to learn from Built into every chapter are a number of features that help readers grasp major concepts develop a broad understanding of psychology's diversity and see for themselves how psychology relates to the practical problems of everyday life Professors and readers appreciate the way that Dennis Coon speaks to his them His delight in the subject matter of psychology and in his own readers curiosity insights imagination and interest is apparent on every page While Coon reports the latest research the latest controversies and the key scientific content important to the course he does so with a sense of humor and an awareness of readers learning needs that set his book apart from any other in the field In a course where professors are frequently confronted by readers who haven't actually read their textbooks Coon's text offers a solution Coon effectively presents an approach that involves readers and gets them hooked on psychology and eager to read on Because readers become actively involved with the material they develop a basic understanding of psychology that they take with them into their future courses and careers Dennis Coon was the first textbook author to make effective use of cognitive principles to teach psychology by building each chapter around the SQ3R study reading formula survey question read recite and review Because SQ3R has been a part of the underlying structure of the text from its inception this proven method works better in Coon's text than in any of the many texts that have emerged over the years that have incorporated the SQ3R structure as an add on **Essential Genetics** Daniel L. Hartl, Elizabeth W. Jones, 2006 Completely updated to reflect new discoveries and current thinking in the field the fourth edition of this classic text offers a student friendly introduction to contemporary genetics Designed for the shorter less comprehensive introductory course in genetics *Essential Genetics* Fourth Edition continues the success of Hartl and Jones previous editions by including carefully chosen topics that provide a solid foundation for understanding the basic processes of gene mutation expression and regulation The text also gives students a sense of the social and historical context in which genetics has developed
