Saleh, Malvin Carl Teich, 2020-03-04 *Fundamentals of Photonics* A complete thoroughly updated full color third edition *Fundamentals of Photonics Third Edition* is a self contained and up to date introductory level textbook that thoroughly surveys this rapidly expanding area of engineering and applied physics Featuring a blend of theory and applications coverage includes detailed accounts of the primary theories of light including ray optics wave optics electromagnetic optics and photon optics as well as the interaction of light and matter Presented at increasing levels of complexity preliminary sections build toward more advanced topics such as Fourier optics and holography photonic crystal optics guided wave and fiber optics LEDs and lasers acousto optic and electro optic devices nonlinear optical devices ultrafast optics optical interconnects and switches and optical fiber communications The third edition features an entirely new chapter on the optics of metals and plasmonic devices Each chapter contains highlighted equations exercises problems summaries and selected reading lists Examples of real systems are included to emphasize the concepts governing applications of current interest Each of the twenty four chapters of the second edition has been thoroughly updated

**Telescope Eyepieces** Sean G. Ryan, 2025-11-28 Anyone who has looked through binoculars a telescope or microscope has used an eyepiece *Telescope Eyepieces Optical Theory and Design* explores the wide range of eyepiece designs It introduces optics theory progressively to build understanding of how lenses control light in an optical system both generally and in eyepieces specifically linking optics fundamentals design evolution and the implications for image quality This book presents a logical narrative starting with Snell's law of refraction at a flat surface progressing to paraxial and real rays at spherical and aspherical surfaces lenses and thin lens systems It demystifies the origin of aberrations by considering wavefront deviations all brought to life in the context of the familiar eyepiece Principles are explored both descriptively and mathematically and carefully interpreted so the reader is not swamped by a sea of equations This book contains many diagrams of ray tracing results to illustrate optical principles and the consequences of design choices enabling the reader to visualise their impact on image quality and to cut through the puffery that is sometimes found in the marketing of telescope eyepieces It bridges the gap between introductory books and expert level optical design texts written jointly for an astronomy readership and for physics and optical design students **Key Features** Develops an understanding of optics by focusing on the design variations of a particular multi lens system the eyepiece which readers will have used when looking through binoculars telescopes and microscopes Combines descriptions and interpretations of theory with many illustrative visualisations of eyepiece designs to help the reader develop an intuitive understanding of optics and aberrations in the familiar context of eyepieces Written by a Professor of Astrophysics with experience as both an amateur and professional observer using telescopes at observatories around the world **LED Lighting** Malvin Carl Teich, 2025-04-14 *LED Lighting* is a self contained and introductory level book featuring a blend of theory and applications that thoroughly covers this

important interdisciplinary area Building on the underlying fields of optics photonics and vision science it comprises four parts PART I is devoted to fundamentals The behavior of light is described in terms of rays waves and photons Each of these approaches is best suited to a particular set of applications The properties of blackbody radiation thermal light and incandescent light are derived and explained The essentials of semiconductor physics are set forth including the operation of junctions and heterojunctions quantum wells and quantum dots and organic and perovskite semiconductors PART II deals with the generation of light in semiconductors and details the operation and properties of III V semiconductor devices MQWLEDs microLEDs quantum dot devices QLEDs WQLEDs organic semiconductor devices OLEDs SMOLEDs PLEDs WOLEDs and perovskite devices PeLEDs PPeLEDs QPeLEDs PeWLEDs PART III focuses on vision and the perception of color as well as on colorimetry It delineates radiometric and photometric quantities as well as various measures of luminous efficacy and efficiency It also elucidates the significance of commonly used LED lighting metrics such as the color rendering index CRI color temperature CT correlated color temperature CCT and chromaticity diagram PART IV is devoted to LED lighting focusing on its history and salutary features and on how this modern form of illumination is deployed It describes the principal components used in LED lighting including phosphor conversion LEDs PCLEDs for generating cool and warm white light chip on board COB devices color mixing LEDs LED filaments retrofit LED lamps hybrid devices LED luminaires and OLED light panels It concludes with a discussion of smart and connected lighting that reviews plant centric lighting and highlights the roles of gamma and circadian brain rhythms in human centric lighting Finally the performance metrics for traditional and LED light sources are summarized Each chapter contains practical examples highlighted equations color coded figures and an extensive bibliography
