Potentials and Trends in Biomimetics Arnim Gleich,Christian Pade,Ulrich Petschow,Eugen Pissarskoi,2010-03-18

There is a wide consensus about the necessity of sustainable development There is also a consensus that wide areas of our

economy industry and technology and the life styles in industrialized countries are not sustainable Science and technology are widely regarded as main causes for this situation Issues in this context comprise the generally low resource efficiency an increased and mostly undebated technological power an increased invasiveness of modern technologies increasing amounts and variety of pollutants and high technological risks On the other hand science and technology are also regarded as main solution providers towards more sustainability Thus the question is which type of science and technology is rather a part of the problem and which type is rather a part of the solution Learning from nature may give some orientation in this context Biomimetics and bionics are widely regarded as being a part of the solution
