

Midterm study Guide for Developmental

Basic issues in the study of human development

Explain Variational vs. Transformational change in development

Transformational change in development

- discontinuity
- stages
- hierarchical nonlinear, qualitative, dynamic change in complexity of pattern
- emergence of novelty
- emphasis on maturation

Variational change in development

- continuity
- incremental
- no stages
- linear, qualitative change in complexity of elements
- skills become more precise or accurate: e.g. increase in vocabulary, better school grades
- combination and reorganization of elements

Discuss different views on how causes relate to each other (reductionism vs. holism)

Reductionism

- parts independently relate to one another
- understanding the nature of complex things by reducing them to interactions of their parts, or to simpler, more fundamental things

Holism

- the whole meaningfully together
- the idea that any system and its properties should be viewed as wholes, not just a collection of parts
- the idea that the whole is more than the sum of its parts

Resilience in human development

What does resilience in development mean?

- the capacity of a dynamic system to adapt successfully to disturbances that threaten system function, viability, or development
- positive adaptation or development in the context of exposure to significant adversity
- encompasses capacity to do well under adversity, recovery from catastrophe, coping with challenges, posttraumatic growth, achievement of good outcomes among people at high risk for failure or maladaptation
- does not mean invulnerability or smooth sailing through life
- depends on the nature of the threat and quality of adjustment to it

How do risk factors and protective factors differ?
