*Mathematical Modelling Courses for Engineering Education* Yasar Ersoy,Alfredo O. Moscardini,2013-06-29 As the role of the modern engineer is markedly different from that of even a decade ago the theme of engineering mathematics education EME is an important one The need for mathematical modelling MM courses and consideration of the educational impact of computer based technology environments merit special attention This book contains the proceeding of the NATO Advanced Research Workshop held on this theme in July 1993 We have left the industrial age behind and have entered the information age Computers and other emerging technologies are penetrating society in depth and gaining a strong influence in de

termining how in future society will be organised while the rapid change of information requires a more qualified work force This work force is vital to high technology and economic competitive ness in many industrialised countries throughout the world Within this framework the quality of EME has become an issue It is expected that the content of mathematics courses taught in schools of engineering today have to be re evaluated continuously with regard to computer based technology and the needs of mod ern information society The main aim of the workshop was to pro vide a forum for discussion between mathematicians engineering scientists mathematics educationalists and courseware develop ers in the higher education sector and to focus on the issues and problems of the design of more relevant and appropriate MM courses for engineering education
