Optimization Reiner Horst,Tuy Hoang,1990 The enormous practical need for solving global optimization problems coupled with a rapidly advancing computer technology has allowed one to consider problems which a few years ago would have been considered computationally intractable As a consequence we are seeing the creation of a large and increasing number of diverse algorithms for solving a wide variety of multiextremal global optimization problems The goal of this book is to systematically clarify and unify these diverse approaches in order to provide insight into the underlying concepts and their properties Aside from a coherent view of the field much new material is presented By definition a multiextremal global optimization problem seeks at least one global minimizer of a real valued objective function that possesses different local n minimizers The feasible set of points in IR is usually determined by a system of inequalities It is well known that in practically all disciplines where mathematical models are used there are many real world problems which can be formulated as multi extremal global optimization problems *Scheduling* Chung-Yee Lee,Lei Lei,1997 *Indian Books in Print* ,2003
