Statistical Methods For Recommender Systems:

Statistical Methods for Recommender Systems Deepak K. Agarwal,Bee-Chung Chen,2016-02-24 Designing algorithms to recommend items such as news articles and movies to users is a challenging task in numerous web applications The crux of the problem is to rank items based on users responses to different items to optimize for multiple objectives Major technical challenges are high dimensional prediction with sparse data and constructing high dimensional sequential designs to collect data for user modeling and system design This comprehensive treatment of the statistical issues that arise in recommender systems includes detailed in depth discussions of current state of the art methods such as adaptive sequential designs multi armed bandit methods bilinear random effects models matrix factorization and scalable model fitting using modern computing paradigms like MapReduce The authors draw upon their vast experience working with such large scale systems at Yahoo and LinkedIn and bridge the gap between theory and practice by illustrating complex concepts with examples from applications they are directly involved with *Review and Implementation of Common Statistical Methods for Recommender Systems* Candace Jennifer McKeag,2021 As a result of today s massive information overload the exploration and development of recommender systems is burgeoning This paper consists of a comprehensive literature review in which the current knowledge surrounding statistical methods for recommender systems is outlined and evaluated For each method the theoretical premise and application related aspects such as optimal use cases and common research problems are described To round out the literature review an implementation of several collaborative filtering techniques is conducted in order to apply the discussed theory and identify some advantages and disadvantages of the methods

   Recommender Systems for Information Providers Andreas W. Neumann,2009-03-03 Information providers are a very promising application area of recommender systems due to the general problem of assessing the quality of information products prior to the purchase Recommender systems automatically generate product recommendations customers profit from a faster finding of relevant products stores profit from rising sales All aspects of recommender systems are covered the economic background mechanism design a survey of systems in the Internet statistical methods and algorithms service oriented architectures user interfaces as well as experiences and data from real world applications Specific solutions for areas with strong privacy concerns scalability issues for large collections of products as well as algorithms to lessen the cold start problem for a faster return on investment of recommender projects are addressed This book describes all steps it takes to design implement and successfully operate a recommender system for a specific information platform   *Sparsity, Scalability, and Distribution in Recommender Systems* Badrul Munir Sarwar,2001   *Meeting User Information Needs in Recommender Systems* Sean Michael McNee,2006   **Probabilistic Approaches to Recommendations** Nicola Barbieri,Giuseppe Manco,Ettore Ritacco,2014-05-01 The importance of accurate recommender systems has been widely recognized by academia and industry and recommendation is rapidly becoming one of the most successful applications of data mining and machine learning Understanding and predicting the choices and preferences of users is a challenging task real world scenarios involve users behaving in complex situations where prior beliefs specific tendencies and reciprocal influences jointly contribute to determining the preferences of users toward huge amounts of information services and products Probabilistic modeling represents a robust formal mathematical framework to model these assumptions and study their effects in the recommendation process This book starts with a brief summary of the recommendation problem and its challenges and a review of some widely used techniques Next we introduce and discuss probabilistic approaches for modeling preference data We focus our attention on methods based on latent factors such as mixture models probabilistic

matrix factorization and topic models for explicit and implicit preference data These methods represent a significant advance in the research and technology of recommendation The resulting models allow us to identify complex patterns in preference data which can be exploited to predict future purchases effectively The extreme sparsity of preference data poses serious challenges to the modeling of user preferences especially in the cases where few observations are available Bayesian inference techniques elegantly address the need for regularization and their integration with latent factor modeling helps to boost the performances of the basic techniques We summarize the strengths and weakness of several approaches by considering two different but related evaluation perspectives namely rating prediction and recommendation accuracy Furthermore we describe how probabilistic methods based on latent factors enable the exploitation of preference patterns in novel applications beyond rating prediction or recommendation accuracy We finally discuss the application of probabilistic techniques in two additional scenarios characterized by the availability of side information besides preference data In summary the book categorizes the myriad probabilistic approaches to recommendations and provides guidelines for their adoption in real world situations   ACM Transactions on Information Systems ,2005 Considers the design performance and evaluation of computer systems that facilitate the presentation of information in a variety of media as well as the underlying technologies that support these systems Major themes include information retrieval and information filtering information interfaces natural language processing knowledge and information representation multimedia information systems networked information systems organizational interfaces and social impact of information systems and design and evaluation
