Newton's Apple and Other Myths about Science Ronald L. Numbers, Kostas Kampourakis, 2015-11-04 A Guardian Favourite Reads as Chosen by Scientists Selection Tackles some of science's most enduring misconceptions Discover A falling apple inspired Isaac Newton's insight into the law of gravity or did it really Among the many myths debunked in this refreshingly irreverent book are the idea that alchemy was a superstitious pursuit that Darwin put off publishing his theory of evolution for fear of public reprisal and that Gregor Mendel was ahead of his time as a pioneer of genetics More recent myths about particle physics and Einstein's theory of relativity are discredited too and a number of dubious generalizations like the notion that science and religion are antithetical or that science can neatly be distinguished from pseudoscience go under the microscope of history Newton's Apple and Other Myths about Science brushes away popular fictions and refutes the widespread belief that science advances when individual geniuses experience Eureka moments and suddenly grasp what those around them could never imagine Delightful thought provoking Every reader should find something to surprise them Jim Endersby Science Better than just countering the myths the book explains when they arose and why they stuck The Guardian

Unbelievable Michael Newton Keas, 2019-01-08 Unbelievable explodes seven of the most popular and pernicious myths about science and religion Michael Newton Keas a historian of science lays out the facts to show how far the conventional wisdom departs from reality He also shows how these myths have proliferated over the past four centuries and exert so much influence today infiltrating science textbooks and popular culture The seven myths Keas shows amount to little more than religion bashing especially Christianity bashing Unbelievable reveals Why the Dark Ages never happened Why we didn't need Christopher Columbus to prove the earth was round Why Copernicus would be shocked to learn that he supposedly demoted humans from the center of the universe What everyone gets wrong about Galileo's clash with the Church and why it matters today Why the vastness of the universe does not deal a blow to religious belief in human significance How the popular account of Giordano Bruno as a martyr for science ignores the fact that he was executed for theological reasons not scientific ones How a new myth is being positioned to replace religion a futuristic myth that sounds scientific but isn't In debunking these myths Keas shows that the real history is much more interesting than the common narrative of religion at war with science This accessible and entertaining book offers an invaluable resource to students scholars teachers homeschoolers and religious believers tired of being portrayed as anti intellectual and anti science

Species of Origins Karl W. Giberson, Donald A. Yerxa, 2002-10-09 In Species of Origins Karl W Giberson and Donald A Yerxa examine America's controversial conversation about creation and evolution While noting that part of the

discord stems from the growing cultural and religious diversity of the United States they argue powerfully that the real issue is the headlong confrontation between two seemingly incompatible worldviews upon which millions of Americans rely modern naturalistic science and traditional Judeo Christian religions *Astronomy Education* John R.
