### Multiple Choice

*Identify the choice that best completes the statement or answers the question.*

- Gregor Mendel used pea plants to study
  - flowering.
  - gamete formation.
  - the inheritance of traits.
  - cross-pollination.
- Offspring that result from crosses between true-breeding parents with different traits
  - are true-breeding.
  - make up the  $F_2$  generation.
  - make up the parental generation.
  - are called hybrids.
- The chemical factors that determine traits are called
  - alleles.
  - traits.
  - genes.
  - characters.
- Gregor Mendel concluded that traits are
  - not inherited by offspring.
  - inherited through the passing of factors from parents to offspring.
  - determined by dominant factors only.
  - determined by recessive factors only.
- When Gregor Mendel crossed a tall plant with a short plant, the  $F_1$  plants inherited
  - an allele for tallness from each parent.
  - an allele for tallness from the tall parent and an allele for shortness from the short parent.
  - an allele for shortness from each parent.
  - an allele from only the tall parent.
- The principle of dominance states that
  - all alleles are dominant.
  - all alleles are recessive.
  - some alleles are dominant and others are recessive.
  - alleles are neither dominant nor recessive.
- When Gregor Mendel crossed true-breeding tall plants with true-breeding short plants, all the offspring were tall because
  - the allele for tall plants is recessive.
  - the allele for short plants is dominant.
  - the allele for tall plants is dominant.
  - they were true-breeding like their parents.
- A tall plant is crossed with a short plant. If the tall  $F_1$  pea plants are allowed to self-pollinate,
  - the offspring will be of medium height.
  - all of the offspring will be tall.
  - all of the offspring will be short.

**Genetics** Lori B. Andrews, Maxwell J. Mehlman, Mark A. Rothstein, 2006. This is the revised edition of the casebook *Genetics: Ethics, Law, and Policy*, which has been used successfully in law schools in both the seminar and course context. It is authored by three of the nation's leading experts on genetic ethics, law, and policy. Students enjoy the course because of the topicality of the subjects, many of which they hear about in the news: gene discoveries, embryo stem cell research. Faculty members enjoy teaching from the book because of the excellent teaching manual and because they can link it to other topics the casebook covers: issues in health law, employment law, insurance law, criminal law, family law, and other fields. The casebook is supplemented regularly on the TWEN website so that it is always current. A background in genetics is not required for either students or teachers. The casebook and teachers manual are written so that the casebook can be used for undergraduate courses or courses for the health professions, for public health, or for public policy.
