Design for Embedded Image Processing on FPGAs Donald G. Bailey, 2023-08-14 Design for Embedded Image Processing on FPGAs Bridge the gap between software and hardware with this foundational design reference Field programmable gate arrays FPGAs are integrated circuits designed so that configuration can take place Circuits of this kind play an integral role in processing images with FPGAs increasingly embedded in digital cameras and other devices that produce visual data outputs for subsequent realization and compression These uses of FPGAs require specific design processes designed to mediate smoothly between hardware and processing algorithm Design for Embedded Image Processing on FPGAs provides a comprehensive overview of these processes and their applications in embedded image processing Beginning with an overview of image processing and its core principles this book discusses specific design and computation techniques with a smooth progression from the foundations of the field to its advanced principles Readers of the second edition of Design for Embedded Image Processing on FPGAs will also find Detailed discussion of image processing techniques including point operations histogram operations linear transformations and more New chapters covering Deep Learning algorithms and Image and Video Coding Example applications throughout to ground principles and demonstrate techniques Design for Embedded Image Processing on FPGAs is ideal for engineers and academics working in the field of Image Processing as well as graduate students studying Embedded Systems Engineering Image Processing Digital Design and related fields

Design for Embedded Image Processing on FPGAs Donald G. Bailey, 2011-06-13 Dr Donald Bailey starts with introductory material considering the problem of embedded image processing and how some of the issues may be solved using parallel hardware solutions Field programmable gate arrays FPGAs are introduced as a technology that provides flexible fine grained hardware that can readily exploit parallelism within many image processing algorithms A brief review of FPGA programming languages provides the link between a software mindset normally associated with image processing algorithms and the hardware mindset required for efficient utilization of a parallel hardware design The design process for implementing an image processing algorithm on an FPGA is compared with that for a conventional software implementation with the key differences highlighted Particular attention is given to the techniques for mapping an algorithm onto an FPGA implementation considering timing memory bandwidth and resource constraints and efficient hardware computational techniques Extensive coverage is given of a range of low and intermediate level image processing operations discussing efficient implementations and how these may vary according to the application The techniques are illustrated with several example applications or case studies from projects or applications he has been involved with Issues such as interfacing between the FPGA and peripheral devices are covered briefly as is designing the system in such a way that it can be more readily debugged and tuned Provides a bridge between algorithms and hardware Demonstrates how to avoid many of the potential pitfalls Offers practical recommendations and solutions Illustrates several real world applications and case studies

Allows those with software backgrounds to understand efficient hardware implementation Design for Embedded Image Processing on FPGAs is ideal for researchers and engineers in the vision or image processing industry who are looking at smart sensors machine vision and robotic vision as well as FPGA developers and application engineers The book can also be used by graduate students studying imaging systems computer engineering digital design circuit design or computer science It can also be used as supplementary text for courses in advanced digital design algorithm and hardware implementation and digital signal processing and applications Companion website for the book www.wiley.com/go/bailey_fpga

An Embedded System Supporting Dynamic Partial Reconfiguration of Hardware Resources for Morphological Image Processing Gyana Ranjan Sahu,2015 Processors for high performance computing applications are generally designed with a focus on high clock rates parallelism of operations and high communication bandwidth often at the expense of large power consumption However the emphasis of many embedded systems and untethered devices is on minimal hardware requirements and reduced power consumption With the incessant growth of computational needs for embedded applications which contradict chip power and area needs the burden is put on the hardware designers to come up with designs that optimize power and area requirements This thesis investigates the efficient design of an embedded system for morphological image processing applications on Xilinx FPGAs Field Programmable Gate Array by optimizing both area and power usage while delivering high performance The design leverages a unique capability of FPGAs called dynamic partial reconfiguration DPR which allows changing the hardware configuration of silicon pieces at runtime DPR allows regions of the FPGA to be reprogrammed with new functionality while applications are still running in the remainder of the device The main aim of this thesis is to design an embedded system for morphological image processing by accounting for real time and area constraints as compared to a statically configured FPGA IP Intellectual Property cores are synthesized for both static and dynamic time DPR enables instantiation of more hardware logic over a period of time on an existing device by time multiplexing the hardware realization of functions A comparison of power consumption is presented for the statically and dynamically reconfigured designs Finally a performance comparison is included for the implementation of the respective algorithms on a hardwired ARM processor as well as on another general purpose processor The results prove the viability of DPR for morphological image processing applications
