**Toward 5G Software Defined Radio Receiver Front-Ends** Silvan Spiridon, 2016-06-21 This book introduces a new intuitive design methodology for the optimal design path for next generation software defined radio front ends SDRXs The methodology described empowers designers to attack the multi standard environment in a parallel way rather than serially providing a critical tool for any design methodology targeting 5G circuits and systems Throughout the book the SDRX design follows the key wireless standards of the moment i e GSM WCDMA LTE Bluetooth WLAN since a receiver compatible with these standards is the most likely candidate for the first design iteration in a 5G deployment The author explains the fundamental choice the designer has to make regarding the optimal channel selection how much of the blockers interferers will be filtered in the analog domain and how much will remain to be filtered in the digital domain The system level analysis the author describes entails the direct sampling architecture is treated as a particular case of mixer based direct conversion architecture This allows readers give a power consumption budget to determine how much filtering is required on the receive path by considering the ADC performance characteristics and the corresponding blocker diagram
