Assessing Students with Special Needs James A. McLoughlin, Rena B. Lewis, 2008 This comprehensive text for future teachers of learners with disabilities is grounded in the idea that assessment is at the center of all good teaching Its hallmarks are its accessibility balanced coverage of both this formal and informal assessment plus thorough exploration of the link between gathering information and actually using it to make informed decisions Offering a step by step Assessment Question Model on the inside front cover it equips readers to understand the complete assessment process from choosing the best tool to adapting instruction to improving outcomes Popular as well as lesser known tools are examined in order to acquaint readers with promising procedures for assessing students with special needs

Assessing Students with Special Needs John Venn, 2007 Known for its practical applied approach the fourth edition of John Venn's *Assessing Student's with Special Needs* continues to focus on how teachers can use assessment as a guide to instruction This noteworthy revision focuses on what teachers really need to know to include assessment in the curriculum Coverage includes all of the core information expected of an assessment text but the book goes far beyond the basics by addressing multicultural considerations technology and assessment high stakes testing and the reauthorization of IDEA The book clearly shows how assessment is more than giving a test to a child but is an essential tool for teachers as they help students achieve learn develop and grow

The Development of Visuospatial Attentional Orienting Rina Schul, 2003 As our current understanding of the mechanisms of attentional orienting is based primarily on studies with adults I set out to track normal and abnormal development of visuospatial attentional orienting To that end I examined typically developing individuals and individuals with one of two developmental disorders Specific Language Impairment SLI or Williams Syndrome WS on one task assessing visual discrimination and another wherein accurate performance additionally requires attentional orienting The latter task patterned after Posner's cuing paradigm reveals patterns of attentional shift and disengagement and the

benefits and costs of attentional orienting An initial study examined 200 typically developing children 7 17 yrs and 40 young adults 18 40 yrs and found gradual improvement from 7 to 18 years in a the speed and efficiency of attentional orienting and b the efficiency of disengaging attention and processing stimuli in unattended locations A second study examined 15 children 7 15 yrs with SLI Though known for their significant language problems in the absence of hearing impairment low nonverbal IQ social emotional disorder or frank neurological damage SLI individuals also exhibit less specific perceptual and motor deficits presumably due to generalized slowness in processing Since the covert movement of attention relies on rapid neurocognitive processes I expected this to be adversely affected in SLI While the SLI group displayed slowed visual processing and motor responses relative to age matched controls the speed of their visuospatial attentional orienting was normal A third study examined 16 individuals 16 47 yrs with WS who have the mental age of young children however with relative strengths in language and face processing and profound deficits in visuospatial processing Moreover as WS brains have anomalies primarily in dorsal posterior areas including the parietal cortex and cerebellum both implicated in attention I hypothesized that WS visuospatial attentional orienting might be impaired WS performance on the attention test was severely compromised although they did demonstrate use of attentional cues to direct their behavior Together my data illustrate age related changes in the efficiency and speed of components of visuospatial attentional orienting during the school age years These changes appear to be unaffected in SLI and arrested in WS

Visual Reflections Michael McCloskey, 2009-04-30 How much
can we learn about normal visual perception and cognition from a malfunctioning visual system Quite a lot as Michael
McCloskey makes abundantly clear in this book McCloskey presents his work with AH a college student who has an
extraordinary deficit in visual perception When AH looks at an object she sees it clearly and identifies it readily yet she is
often dramatically mistaken about where the object is or how it is oriented For example she may reach out to grasp an object
that she sees on her left but miss it completely because it is actually on her right or she may see an arrow pointing up when it
is really pointing down AH's errors together with many other clues lead McCloskey to some very interesting conclusions
about how we perceive the world He develops theoretical claims about visual subsystems the nature of visual location and
orientation representations attention and spatial representations the role of the visual system in mental imagery and the
levels of the visual system implicated in awareness Visual Reflections makes a fascinating and compelling case that we can

often learn more about a process when it goes awry than when it functions flawlessly
