Towards Energy Smart Homes Stephane Ploix, Manar Amayri, Nizar Bouguila, 2021-11-11 This book exemplifies how smart buildings have a crucial role to play for the future of energy. The book investigates what already exists in regards to technologies, approaches and solutions both with a scientific and technological point of view. The authors cover solutions for mirroring and tracing human activities, optimal strategies to configure home settings and generating explanations and persuasive dashboards to get occupants better committed in their home energy managements. Solutions are adapted from the fields of Internet of Things, physical modeling, optimization, machine learning and applied artificial intelligence. Practical applications are given throughout.

Digital Data Collection and Information Privacy Law Mark Burdon, 2020-04-23 In *Digital Data Collection and Information Privacy Law*, Mark Burdon argues for the reformulation of information privacy law to regulate new power consequences of ubiquitous data collection. Examining developing business models based on collections of sensor data with a focus on the smart home, Burdon demonstrates the challenges that are arising for information privacy's control model and its application of principled protections of personal information exchange. By reformulating information privacy's primary role of individual control as an interrupter of modulated power, Burdon provides a foundation for future law reform and calls for stronger information privacy law protections. This book should be read by anyone interested in the role of privacy in a world of ubiquitous and pervasive data collection.

Life Insurance in Europe Marta Borda, Simon Grima, Ilona Kwiecień, 2020-10-21 This book examines the challenges for the life insurance sector in Europe arising from new technologies, socio-cultural and demographic trends and the financial crisis. It presents theoretical and applied research in all areas related to life insurance products and markets and explores future determinants of the insurance industry's development by highlighting novel solutions in insurance supervision and trends in consumer protection. Drawing on their academic and practical expertise, the contributors identify problems relating to risk analysis and evaluation, demographic challenges, consumer protection, product distribution, mortality risk modeling, applications of life insurance in contemporary pension systems, financial stability and solvency of life insurers. They also examine the impact of population aging on life insurance markets and the role of digitalization. Lastly, based on an analysis of early experiences with the implementation of the Solvency II system, the book provides policy recommendations for the development of life insurance in Europe.
