Signal Transduction in Mast Cells and Basophils Ehud Razin, Juan Rivera, 2012-12-06 Mast cells and basophils are responsible for inflammatory and allergic reactions. As such, the signals that generate these responses and how their pathways of action work are the focus of much present-day research into allergy and inflammation. This book focuses primarily on the molecular mechanisms that govern mast cell and basophil cell biology and function, as well as providing a comprehensive summary of the field of signal transduction and also giving insights into areas that have therapeutic potential. The book provides detailed insights into mast cell and basophil growth and development, their activation by allergens, including details of receptor activation and downstream events and the regulators of morphology and degranulation. The metabolic pathways involved in prostaglandin and leukotriene production are discussed, as is the role of transcription factors in mast cell growth and cytokine production. Written by leaders in the field, this volume will provide the reader with an up-to-date account of a topic where the rapid progress makes conventional information gathering difficult. *The Jewelers' Circular and Horological Review*, 1899

The Excellence Engine Tool Kit Chester D. Rowe, Stephen M. Davis, 2008-08-23 This revised workbook introduces the use of a new Cause Investigation tool, the Cause Road Map. This Cause Road Map is a multi-function event cause investigation tool that provides a structured approach to finding the underlying causes for events. It will provide a comprehensive taxonomy for EVERY cause investigation, including root cause, apparent cause, equipment cause, and common cause. This workbook guides the reader through the use of various investigation analysis and event modeling tools, including the Excellence Engine's Cause Road Map. Following the discussion on various investigation and modeling tools, the authors show why integrating multiple tools with the Cause Road Map is necessary to reveal latent causal factors. This revised workbook also includes discussions on many other topics key to the success of event investigations.

Given the overwhelming success of the first edition, which appeared in 2001, and fast development in the different fields of cancer research, it has been decided to publish a second, fully revised and expanded edition. With an A-Z format of over 7,000 entries, more than 1,000 contributing authors provide a complete reference to cancer. The merging of different basic and clinical scientific disciplines towards the common goal of fighting cancer makes such a comprehensive reference source all the more timely. **Cumulated Index Medicus**
